## OBSERVATIONS OF TEACHING-LEARNING IN ACTUAL SCHOOL ENVIRONMENT

### Episode 11 Utilizing Teaching-Learning Resources and ICT

#### SPARK Your Interest

With the light speed by which technology is evolving now with 4.0, technology continues to be an ever significant part of the learning environment. This episode provides an opportunity for students to examine a Learning Resource Center or Multi-Media Center and learn about its collection, services, equipment, observe how a teacher utilizes technology for instruction, and explore resources in the virtual learning environment. Students will analyze and reflect on how technology, including artificial intelligence, supports the teaching-learning process.

#### TARGET Your Intended Learning

At the end of this Episode, I must be able to:

- Identify and classify learning resource materials in the multi-media center;
- Show skills in the positive use of ICT to facilitate the teaching-learning process (PPST 1.3.1);
- Show skills in the evaluation, selection, development, and use of a variety learning resources, including ICT to address learning goals (PPST 4.5.1);
- Analyze the level of technology integration in the classroom; and
- Demonstrate motivation to utilize ICT for professional development goals based on the PPST (PPST 7.5.1).

#### REVISIT the Learning Essentials

UNESCO ICT Competency Framework for Teachers Version 3 (ICT CFT v3, 2018)

The Information and Communications Technology Competency Framework for Teachers (ICT CFT) version 3 is a comprehensive framework guide teachers' development on the effective and appropriate use of ICT in education. It highlights what teachers should know and do clustered in six aspects, namely: 1. Understanding ICT in Education, 2. Curriculum and Assessment, 3. Pedagogy, 4. Application of Digital Skills, 5. Organization and administration, and 6. Teacher Professional Learning.

## OBSERVATIONS OF TEACHING-LEARNING IN ACTUAL SCHOOL ENVIRONMENT

### Episode 11 Utilizing Teaching-Learning Resources and ICT

Similar to the PPST, the ICT CFT also articulated competencies in levels which guide teachers as they develop their ICT skills from Level 1, Knowledge Acquisition, to Level 2, Knowledge Deepening, and Level 3, Knowledge Creation. The Commission on Higher — Teacher Education Curricula (2017) includes the UNESCO ICT CFT so most likely you have tackled this in your Technology for Teaching and Learning classes.

It will be good to review the UNESCO ICT CFT v3 framework as you work in this episode. The activities here are meant for you to observe, analyze, and reflect about the competencies discussed in the framework. (Access it at [https://www.open.edu/openlearncreate/pluginfile.php/306820/mod\\_resource/content/2/UNESCO%20ICT%20Competency%20Framework%20V3.pdf](https://www.open.edu/openlearncreate/pluginfile.php/306820/mod_resource/content/2/UNESCO%20ICT%20Competency%20Framework%20V3.pdf))

#### The Learning Resource Center

1. A school usually sets up a center that will provide valuable support to the teaching-learning process. Over the years the name of this center has evolved. Some of the names are Audiovisual Center, Media and Technology Resource Center, Teaching-Learning Technology Department, or Simply Learning Resource Center.
2. With the swift development of ICT, the natural outcome was the ever-expanding interface between the traditional library and ICT both in terms of hardware and software systems and applications.
3. Schools may have different set-ups when it comes to a Learning Resource Center (LRC). Some have replaced the term library with LRC. Some have a separate library, LRC, and Audio Visual or Media Center. Some only have the LRC both for teachers and students. Still, some have combined their learning resource centers with maker spaces.
4. The common: purpose among these centers is to provide print, audio-visual and ICT resources to support the teaching-learning process
5. The goals of the Center may include orienting and training teachers in the use of audiovisual and ICT resources, working with teachers and administrators in producing instructional materials, making available useful resources to the students, teachers, and the school community.
6. In order to support the philosophy and aims of the school, the Center must fulfill the following functions: center of resources, laboratory of learning, agent of teaching, service agency, coordinating agency, recreational reading center, and a link to other community resources.

## OBSERVATIONS OF TEACHING-LEARNING IN ACTUAL SCHOOL ENVIRONMENT

### Episode 11 Utilizing Teaching-Learning Resources and ICT

#### Technology Integration

The Technology Integration Matrix provides a comprehensive framework for you to define and evaluate technology integration. It will provide you direction and guide you in the process of achieving effective teaching with technology. The teacher's integration of technology in instruction can be described as progressing in 5 levels: entry, adoption, adaptation, infusion and finally transformation.

The teacher also works at creating a learning environment that encourages and enables quality technology integration. The interdependent characteristics of the learning environment are being active, collaborative, constructive, authentic, and goal-directed.

The Technology Integration Matrix connects the Levels of Technology Integration and the Characteristics of the Learning Environment. Examine the matrix below. To make you understand how integration is done in each of the levels and environment, explore the TIM website and learn from the many interesting videos showing technology integration. Go to <http://fcit.usf.edu/matrix/matrix.php>.

#### Observing technology integration in the classroom

| Technology Integration Matrix               |                                                                                                                                             | Levels of Technology Integration into the Curriculum                                 |                                                                                                                                                                       |                                                                                                                                                                      |                                                                                                                                                     |                                                                                                                                                                                        |
|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                             |                                                                                                                                             | <b>Entry:</b> The teacher uses technology to deliver curriculum content to students. | <b>Adoption:</b> The teacher directs students in the convention use of tool-based software. If such software is available, this level is the recommended entry point. | <b>Adaptation:</b> The teacher encourages adaptation of tool-based software to select a tool and modify its use to accomplish the task at hand.                      | <b>Infusion:</b> The teacher creates a learning environment that infuses the power of technology tools throughout the day and across subject areas. | <b>Transformation:</b> The teacher creates a rich learning environment in which students regularly engage in activities that would have been impossible to achieve without technology. |
| Characteristics of the Learning Environment | <b>ACTIVE:</b> Students are actively engaged in using technology as a tool rather than passively receiving information from the technology. | Students use technology for drill and practice and computer based training.          | Students begin to utilize technology tools to create products, for example using a word processor to create a report.                                                 | Students have opportunities to select and modify technology tools to accomplish specific purpose, for example using colored cells on a spreadsheet to plan a garden. | Throughout the school day, students are empowered to select appropriate technology tools and actively apply them to the tasks at hand.              | Given ongoing access to online resources, students actively select and pursue topics beyond the limitations of even the best school library.                                           |
|                                             | <b>COLLABORATIVE:</b> Students use technology tools to collaborate with others rather than working individually at all times.               | Students primarily work alone when using technology.                                 | Students have opportunities to utilize collaborative tools, such as email, in conventional ways.                                                                      | Students have opportunities to select and modify technology tools to facilitate collaborative work.                                                                  | Throughout the day and across subject areas, students utilize technology tools to facilitate collaborative learning.                                | Technology enables students to collaborate with peers and experts irrespective of time zone or physical distances.                                                                     |
|                                             | <b>CONSTRUCTIVE:</b> Students use technology tools to connect new                                                                           | Technology is used to deliver                                                        | Students begin to utilize constructive tools                                                                                                                          | Students have opportunities to select and modify                                                                                                                     | Students utilize technology to make                                                                                                                 | Students use technology to construct, share,                                                                                                                                           |

## OBSERVATIONS OF TEACHING-LEARNING IN ACTUAL SCHOOL ENVIRONMENT

### Episode 11 Utilizing Teaching-Learning Resources and ICT

|  |                                                                                                                                                                                         |                                                                                                                                                                            |                                                                                                                                 |                                                                                                                                                         |                                                                                                                                |                                                                                                                                                                       |
|--|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | information to their prior knowledge rather than to passively receive information.                                                                                                      | information to students.                                                                                                                                                   | such as graphics organizers to build upon prior knowledge and construct meaning.                                                | technology tools to assist them in the construction of understanding.                                                                                   | connections and construct understanding across disciplines and throughout the day.                                             | and publish knowledge to a worldwide audience.                                                                                                                        |
|  | <b>AUTHENTIC:</b> Students use technology tools to link learning activities to the world beyond the instructional setting rather than working on decontextualized assignments.          | Students use technology to complete assigned activities that are generally unrelated to real-world problems.                                                               | Students have opportunities to apply technology tools to some content-specific activities that are based on real world problem. | Students have opportunities to select and modify technology tools to solve problems based on real-world issues.                                         | Students select appropriate technology tools to complete authentic tasks across disciplines.                                   | By means of technology tools, students participate in outside-of-school projects and problem-solving activities that have meaning for the students and the community. |
|  | <b>GOAL-DIRECTED:</b> Students use technology tools to set goals, plan activities, monitor progress, and evaluate results rather than simply completing assignments without reflection. | Students receive directions, guidance, and feedback from technology, rather than using technology tools to set goals, plan activities, monitor progress, or self-evaluate. | From time to time, students have opportunity to use technology to either plan, monitor, or evaluate an activity.                | Students have opportunities to select and modify technology tools to facilitate goal-setting, planning, monitoring, and evaluating specific activities. | Students use technology tools to set goals, plan activities, monitor progress, and evaluate results throughout the curriculum. | Students engage in ongoing metacognitive activities at a level that would be unattainable without the support of technology tools.                                    |

### Evaluation of ICT Resources

The world wide web is like an endless network of information, ever-expanding and almost limitless. Electronic resources come in different forms like websites, WebQuests, blogs, social network sites, on-line courses, a wide range of tools, and so many forms of apps.

As a future teacher, one of the skills that will be most useful for you is the ability not only to search for information but to make decisions, as to which ones you will take and use and which ones you will put aside. Aim to develop your skills in evaluating internet resources. You will be able to choose the best resources that will help you attain your teaching-learning objectives.

**Below is a set of criteria which you can use to evaluate resources:**

1. Accuracy. The resource material comes from a reliable source and is accurate, free from error and is up-to-date.
2. Appropriateness. The resource is grade/level-appropriate. The 'content matches what is needed by the teacher.
3. Clarity. The resource clearly addresses the instructional goals in mind.
4. Completeness. The content is complete. It has all the information needed to be able to use them.
5. Motivation. The resource is engaging and rewarding to learners. It will encourage the active participation of the learners.
6. Organization. The resource is logically sequenced. It clearly indicates which steps should be taken. The procedures or processes flow smoothly.

## OBSERVATIONS OF TEACHING-LEARNING IN ACTUAL SCHOOL ENVIRONMENT

### Episode 11 Utilizing Teaching-Learning Resources and ICT

(Based on the work of Fitzgerald, Mary Ann, Lovin, Vicki, & Branch, Rober Maribe (2003). A Gateway to Educational Materials: An Evaluation of an Online Resource for Teachers and an Exploration of User Behaviors. Journal of Technology and Teache; Education. 11(1), 21-51).

#### Education 4.0

Shwab described the 4<sup>th</sup> wave of the industrial revolution. The unprecedented speed at which technology is evolving has disrupted many vital processes that involve how we run production, businesses and consequently how we teach and learn. **The following Technology trends have huge potential to transform the ways we teach and learn (UNESCO, 2018):**

**1. Open Educational Resources (OER).** OERs are materials that can be used for teaching and learning that do not require payment of royalties nor license fees. There is an abundance of OERs in the form of textbooks course materials, curriculum maps, streaming videos, multimedia apps, podcasts, and many others. They can have a significant impact on education as they are made available and easily accessible in the internet. Be sure to explore them to help you work on this episode.

**2. Social Networks.** Social networks have revolutionized the way we interact, learn about things and share information. Sites and apps such as Facebook, twitter, Instagram provide a virtual venue for teachers and learners to work together interact among themselves and with other classrooms locally and globally.

**3. Mobile Technologies.** Filipinos are one of the most active on the internet, and also one who sends the most number of text messages per day. This indicates the high number of mobile device users. These devices can also be used as a learning tool by allowing teachers and students more opportunities to learn inside and even outside the classroom.

**4. The Internet of Things.** IoT is a system of computing mechanisms that become built-in into many everyday things, that allow sending and receiving data through the internet. A lot of things have turned “smart.” We have smart cars that can navigate on its own. Smart houses that monitor temperature and light. Smart TVs that interface with the internet. Watches that send our vital signs to our doctors. All of these developments can influence the way we teach and learn.

**5. Artificial Intelligence.** Commonly, artificial intelligence is associated when computers or machine simulate thinking and behaviors of humans such as talking, learning and solving problems. Virtual assistants such as Siri, Alexa, Bixby and Google assistant are near samples of AI. Among others, uses of AI in education can be in the areas of gamification and adaptive instruction for learners with special needs.

## OBSERVATIONS OF TEACHING-LEARNING IN ACTUAL SCHOOL ENVIRONMENT

### Episode 11 Utilizing Teaching-Learning Resources and ICT

**6. Virtual Reality and Augmented Reality.** VR is a simulation of an environment by a computer program that allows a person to visit and experience the environment virtually. In AR, images from computer programs interlay with the actual views of the real-world, resulting in an extended, expanded, or altered view of a real-world environment. In education, among others, VR and AR programs and apps allow more exciting ways of seeing and experiencing things that add to the motivation and engagement of learners.

**7. Big Data.** Through the billions of interactions and transactions are done electronically, and through the internet, an enormous amount of data is generated and stored. The challenge is how to make sense of this data, through analytics and research, possibly answer pertinent questions about how to make teaching and learning most effective.

**8. Coding.** Coding is a skill necessary to create computer software, apps, and websites. Today, there are learning programs that introduce coding activities as early as kindergarten. Robotics programs in the elementary and secondary programs introduce and hone the skills of young learners. Coding helps learners develop novel ways of exploring and trying out ideas, especially when done with problem or project-based learning approaches.

**9. Ethics and privacy protection.** We have repeatedly heard about how quickly technology is changing and impacting our lives. Through all this. It is crucial to ensure that human Values and principles govern or guide our use of technology. Ethical practices that protect the rights of every person need to be upheld.

## OBSERVATIONS OF TEACHING-LEARNING IN ACTUAL SCHOOL ENVIRONMENT

### Episode 11 Utilizing Teaching-Learning Resources and ICT

#### Massive Open On-line Courses

Massive Open On-line Courses (MOOCs) are online courses open to a big group of people. Below are the basic information about MOOCs. Let us focus on each word:

##### Massive

- MOOCs are on-line courses designed for large number of participants, usually larger than the number of students that can fit a regular classroom. There can be hundreds or even be a thousand students or more.

##### Open

- There is mostly freedom of place, pace, and time.
- Courses can be accessed by anyone anywhere as long as they have internet connection.
- Courses are open to everyone without entry qualifications. e Some courses are for free.

##### Online

- All aspects of the course are delivered online.

##### Course

The MOOC course offers a full course experience including:

- Educational content. May include video, audio, text, games, simulations, social media, and animation.
- Facilitation interaction among peers. Builds a learning community through opportunities to interact.
- Some interaction with the teacher or academic staff.
- Activities/tasks, tests, including feedback. Participants are provided with some feedback mechanism. Can be automatically generated like quizzes, feedback from peers or the teacher.
- Some kind of (non-formal) recognition options. It includes some kind of recognition like badges or certificate of completion. A formal certificate is optional and most likely has to be paid for.
- A study guide/syllabus. This includes instructions as to how you may learn from the materials and interactions presented.

- Based on definition Massive Open Online Course v1.1 licensed under Creative Commons Attribution 4.0.

There are many MOOC providers like Edx, Coursera, Udacity, Udemy, Iversity. You will have a chance to explore them as you go through this episode.

#### OBSERVE, ANALYZE, REFLECT

##### Activity 11.1

##### Visiting the Learning Resource Center

Resource Teacher: **Sir Kim Paolo Armin A. Torcelino VI** Teacher's Signature: 

School: **Abaño Laboratory** Grade/Year Level: **10** Subject: **Science** Date: **09/29/25**

To realize the Intended Learning Outcomes, work through these steps:

1. Visit a school's Learning Resource Center. Look around and see what resources and facilities are available inside.
2. Ask the Learning Resource Center in charge about how some equipment or facilities are used.
3. Make an inventory of its available resources and classify them according to their characteristics and functions.

*As you visit and observe the Learning Resource Center, use the observation guide provided.*  
Ask the assistance of the Center staff courteously.

#### An Observation Guide for a LEARNING RESOURCE CENTER

**Read the following statements carefully before you observe.**

1. Go around the Learning Resource Center.
2. Find out what learning resources are present.
3. Examine and describe how the materials are arranged and how they are classified. Are they free from dust and moisture? Are they arranged for easy access?
4. Read the guidelines/procedures for borrowing materials. Are these guidelines? procedures posted are available for the users to refer to?
5. Familiarize yourself with the guidelines and procedures. Take photos of the center (if allowed).

Name of Observer: **Jay John C. Yasis**

Course/Year/School: **BSED-4A Major in Sciences**

#### List of Available Learning Resources

| Available Learning Resources<br>(Enumerate in Bullet Form)                                                                                                                  | Characteristics and Unique Capabilities                                                                                                                                                                                                                         | Teaching Approaches where the Resource is Most Useful                                                                                                                                |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. Print Resources <ul style="list-style-type: none"> <li>Books</li> <li>Magazines</li> <li>Encyclopedia</li> <li>Dictionary</li> <li>Published Research Studies</li> </ul> | These resources provide reliable and detailed information. Books and encyclopedias help deepen understanding, dictionaries improve vocabulary, and research studies support evidence-based learning. They are easy to access anytime, even without electricity. | These resources are most useful in <b>lecture-based</b> and <b>independent learning</b> approaches, especially during research, reading comprehension, and report-making activities. |
| 2. Audio Resources <ul style="list-style-type: none"> <li>Television</li> <li></li> <li></li> </ul>                                                                         | Television provides both audio and visual learning, helping students easily connect theory to real-life examples. It keeps learners engaged through videos, news, and educational programs.                                                                     | It is effective for <b>demonstration</b> and <b>contextual learning</b> approaches, especially when introducing real-world issues or science documentaries.                          |
| 3. Non-electronic Visual Resources <ul style="list-style-type: none"> <li>Books</li> <li>Journals</li> <li>Magazines</li> </ul>                                             | These offer visual support like images, diagrams, and charts that make lessons more understandable. They can also inspire creativity and critical thinking through visuals and stories.                                                                         | These are useful in <b>project-based learning</b> and <b>visual learning</b> approaches where observation, analysis, and creativity are emphasized.                                  |
| 1. ICT Resources <ul style="list-style-type: none"> <li>4 Desktop Computers</li> <li>Internet</li> <li>Television</li> </ul>                                                | ICT resources make learning more interactive and updated. The internet allows access to vast information, computers help with digital outputs, and television enhances multimedia learning.                                                                     | Very useful in <b>blended learning</b> , <b>collaborative tasks</b> , and <b>research-based approaches</b> , where technology supports exploration, presentation, and collaboration. |

## OBSERVATIONS OF TEACHING-LEARNING IN ACTUAL SCHOOL ENVIRONMENT

### Episode 11 Utilizing Teaching-Learning Resources and ICT

Impression about the LRC:

My impression about the Learning Resource Center or the School Library is that it's a really helpful and organized place for both teachers and students. It provides everything needed for effective learning, from books and magazines to computers and internet access. I like how it supports both traditional and modern ways of learning. It feels like a space where curiosity is encouraged, and students can explore beyond what is taught in class. Personally, if I had access to an LRC like this back in high school, I think I would've enjoyed doing research and group work more, because it gives that balance between quiet study and collaborative learning. It just proves how a well-equipped environment can inspire students to study harder because it offers better learning experience.

*College Librarian I*

ICT Competency Standards for Teachers (CHED Teacher Education Programs (2017):

### ANALYZE

Are the Learning resources/materials arranged properly according to their functions and characteristics?

Yes, the learning resources/materials are arranged properly because the library categorizes them by type, making it easy to find books, audio, visuals, or ICT resources.

Do the guidelines and procedures facilitate easy access to the materials by the teachers? Why? Why not?

Yes, the guidelines are clear and simple, so students as well as teachers can easily borrow or use the materials without confusion. This saves time and makes the resources more useful.

What are the strengths of this Learning Resource Center?

The strengths are that the materials are well-organized, accessible, and varied. It caters to different learning styles and gives both teachers and students many options to support learning.

## OBSERVATIONS OF TEACHING-LEARNING IN ACTUAL SCHOOL ENVIRONMENT

### Episode 11 Utilizing Teaching-Learning Resources and ICT

What are the weaknesses?

One weakness is that some resources may be limited in number, like computers, so not everyone can use them at the same time. Another is that ICT tools depend on electricity and internet connection, which may not always be reliable.

What suggestions can you make?

For me, I think it is nearly a perfect library with all of its resources, but adding more updated ICT tools and increasing the number of computers and enlarging the space inside so that more students can access them at the same time.

### REFLECT

1. Which of the materials in the Learning Resource Center caught your interest the most?  
Why?

The ICT resources interest me the most, especially the computers with internet access, really caught my attention. I find them exciting because they open up endless possibilities for teaching and learning. Unlike printed materials that sometimes feel limited, these digital tools allow students to explore, discover, and even create. For me, it feels like they can truly transform the library into a more interactive and modern space.

2. Which gadgets/materials are you already confident to use/operate?

I am already confident in using print resources like books, journals, and encyclopedias because I often rely on them for studying and research back when I was in High school. I'm also comfortable operating computers since I use them a lot for making presentations, searching for information, and even for creating PowerPoint Presentations.

3. Which ones do you feel you need to learn more about?

I think I need to learn more about using audio-visual resources such as televisions and other multimedia tools. I usually just see them being used to show short video loops about how to access the library, the procedures for getting a library card, and other updates about the school and library, but I know there are more creative and effective ways to maximize them in teaching as I can also see teachers using them. I feel that if I can master these, I can really help me in my future teaching carrer.

## OBSERVATIONS OF TEACHING-LEARNING IN ACTUAL SCHOOL ENVIRONMENT

### Episode 11 Utilizing Teaching-Learning Resources and ICT

#### OBSERVE, ANALYZE, REFLECT

##### Activity 11.2

##### Observing Technology Integration in the Classroom

Resource Teacher: Sir Kim Paolo Armin A. Torcelino VI Teacher's Signature: 

School: Abaño Laboratory Grade/Year Level: Grade 10 Subject: Science Date: 09/29/25

To realize my Intended Learning Outcomes, I will work my way through these steps: Observe a class for three meetings. Video-tape, if allowed. **Step 2.** Describe how technology was integrated in the lessons and how the students were involved. **Step 3.** Use the Technology Integration Matrix to analyze the technology integration done by the teacher. **Step 4.** Reflect on what you have learned,

#### OBSERVE

*As you observe the class, use the observation sheets provided for you to document your observations.*

#### Class Observation Guide

**Read the following questions and instructions carefully before you observe.**

1. What is the lesson about?
2. What visual aids/materials/learning resources is the teacher using?
3. Observe and take notes on how the teacher presents/uses the learning resources.
4. Closely observe the learners' response to the teacher's use of learning resources. Listen to their verbal responses. What do their responses indicate? Do their responses show attentiveness, eagerness, and understanding?
5. Focus on their non-verbal responses. Are they learning and are they showing their interest in the lesson and in the materials? Are they looking towards the direction of the teacher and the materials? Do their actions show attentiveness, eagerness, and understanding?

## OBSERVATIONS OF TEACHING-LEARNING IN ACTUAL SCHOOL ENVIRONMENT

### Episode 11 Utilizing Teaching-Learning Resources and ICT

#### OBSERVATION SHEET NO. REPORT

Date of Observation: 09/29/2025

School: Abano Laboratory School

Subject: Science

Topic: Energy Transformation

Grade/Year Level: Grade 10

During our observation, the class was divided into groups, and one group was assigned to report about *Energy Transformation*. The presenters used a laptop and PowerPoint presentation to deliver their discussion, which made their report more organized and visually engaging. As I recall, the slides contained helpful visuals and key points that supported their explanations.

The resource teacher was very supportive to them throughout the activity. Whenever the presenters struggled to explain a concept, he would step in and provide clear and simple examples to help the class understand it better. He also helped keep the class engaged by asking questions not only to the presenters but also to the other students who were listening. I found this technique very clever because it encouraged everyone to pay attention, knowing that anyone might be asked next.

Overall, the discussion went smoothly. The students were participative, attentive, and seemed genuinely interested in the topic. The use of technology, along with the resource teacher's guidance, made the learning experience interactive and meaningful for everyone in the class.

| Subject Matter: <b>Science</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                            |                                                                                                                       |                                                                                                                                             |
| Brief Description of Teaching Approach used by the Teacher:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                            |                                                                                                                       |                                                                                                                                             |
| <p>The resource teacher's teaching approach was a student-centered approach, it is very evident in his way of letting each group in his class to get a chunk of topic about the Energy Transformation for the to discuss by group. This gave the students a chance to explore, understand, and build their own learning as a group. During the discussion, he also asked questions not only to the presenters but also to those who were listening, making sure that everyone stayed engaged and involved during the topic presentation.</p> |                                                                                                                                                                                                            |                                                                                                                       |                                                                                                                                             |
| Teaching Aids used<br>(Enumerate in Bullet Form)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Strengths                                                                                                                                                                                                  | Weaknesses                                                                                                            | Appropriateness of the Teaching Aids used                                                                                                   |
| <ul style="list-style-type: none"> <li>PowerPoint Presentation</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <p>The PowerPoint presentation was clear, well-organized, and visually appealing. It helped the students follow the key points easily and supported the presenters in explaining their assigned topic.</p> | <p>Some slides contained too much text, which made it a bit hard to read from the back of the classroom.</p>          | <p>It is very appropriate, it effectively supported the reporting activity and made the discussion more interactive and understandable.</p> |
| <ul style="list-style-type: none"> <li>Laptop</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <p>The laptop was used efficiently to present visuals (PPT) and videos that made the topic more engaging and connected to real-life applications. It also helped the flow of the report go smoothly.</p>   | <p>The only issue was the occasional lag when switching slides, but it didn't affect the overall discussion much.</p> | <p>It is highly appropriate, it served as the main tool for both the teacher and students to present and explore the lesson clearly.</p>    |

## OBSERVATIONS OF TEACHING-LEARNING IN ACTUAL SCHOOL ENVIRONMENT

### Episode 11 Utilizing Teaching-Learning Resources and ICT

Use the Technology Integration Form to analyze the class you observed. Refer to the Technology Integration matrix on P. 4, In which level of technology integration do you think the teacher you observed operated? Why?

Based on my observation, the resource teacher operated at the “Adoption Level” of technology integration. The use of PowerPoint and a laptop was clearly structured and guided by the resource teacher, allowing students to use technology to support their reporting activity. The students used the laptop to present their group work, but the resource teacher was still the one setting clear directions on how to use it. The technology was used mainly to enhance the presentation and make the lesson more visual and engaging. It showed that the teacher values the role of technology in making learning more interactive and helping students build confidence in using digital tools during class.

Based on the Technology Integration Matrix, what is the characteristics of the learning environment in the class you observed? Point your observations that justify your answer.

The learning environment I observed can be described as collaborative and supportive. The resource teacher allowed students to take charge of the discussion through group reporting, which encouraged teamwork and active participation. Technology, particularly the laptop and PowerPoint, was used to help students discuss their assigned topic more clearly and creatively. The resource teacher also provided guidance whenever the presenters struggled, showing that he was not just focused on finishing the lesson but on helping everyone understand. The class felt safe and engaging because the teacher encouraged both presenters and listeners to participate by asking questions and giving examples. Overall, it was a positive environment where students learned not just from technology they are using, but also from one another.

### REFLECT

1. Put yourself in place if the teacher. What would you do similarly and what would you do differently if you would teach the same lesson to the same group of students? Why?

If I were in the resource teacher’s place, I would still do the same approach of letting the students report by group because it really encourages participation and teamwork. It gives them a sense of responsibility and allows them to explore the topic in their own way. I would also continue using PowerPoint presentations since they make the lesson more organized and visually engaging. What I might do differently, though, is add a short interactive activity after each group’s presentation, like a quick game-based quiz to make the lesson more exciting and help students retain what they learned while they are having fun. I think adding this small change would make the lesson more active, balanced, and memorable for the students.

## OBSERVATIONS OF TEACHING-LEARNING IN ACTUAL SCHOOL ENVIRONMENT

### Episode 11 Utilizing Teaching-Learning Resources and ICT

#### OBSERVE, ANALYZE, REFLECT

#### Exploring Education 4.0

Resource Teacher: **Sir Kim Paolo Armin A. Torcelino VI** Teacher's Signature: \_\_\_\_\_

School: **Abaño Laboratory** Grade/Year Level: **Grade 10** Subject: **Science** Date: **09/29/25**

#### OBSERVE

#### Class Observation Guide

Read the following statements carefully before you observe.

1. What is the lesson about? What are the teacher's objectives?

The lesson is all about **momentum** and how it depends on both the mass and velocity of an object.  
The teacher's objectives are:

- a) Understand that momentum depends on both mass and velocity.
- b) Conduct an experiment to measure the momentum of a bouncing ball, and;
- c) Develop a curiosity about why different surfaces and materials affect collisions differently.

2. Note the important concepts that the teacher is emphasizing.

The resource teacher emphasized that momentum is a product of an object's mass and velocity and that it has both magnitude and direction. He also focused on related concepts like force, impulse, and motion. What stood out to me was how he explained momentum not just as a formula but as something we can actually see in everyday life, like when he used examples using the PhET simulation.

3. Note the skills that the teacher is developing in the learners.

The lesson helped students develop different skills such as observing, experimenting, and solving problems. They also learned how to measure, record, and analyze data during the activity. I noticed how teamwork was also encouraged since they worked together during the experiment. Most of all, the resource teacher can help the students to develop their critical thinking and curiosity by allowing them to ask questions and explore how momentum works beyond the classroom.

## OBSERVATIONS OF TEACHING-LEARNING IN ACTUAL SCHOOL ENVIRONMENT

### Episode 11 Utilizing Teaching-Learning Resources and ICT

#### ANALYZE

Analyzing the information, you got from observing the class, surf the internet to select electronic resources, including OERs, social networking sites, and apps with virtual or augmented reality that will be useful in teaching the same lesson. Evaluate the resources you found, using the set of criteria discussed in the Revisit the Learning Essentials part of this Episode. Use the form below to note your analysis and evaluation.

#### Electronic Resources Evaluation Form

|                                                        |                                                                                                                                                                                                                                                                                                          |                                                      |             |       |          |            |                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|                                                        |                                                                                                                                                                                                                                                                                                          | Accurate                                             | Appropriate | Clear | Complete | Motivating | Organized                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| PhET Interactive Simulation                            | Developed by the University of Colorado Boulder. It allows students to simulate collisions between objects, adjusting mass and velocity to observe momentum changes.                                                                                                                                     | ✓                                                    | ✓           | ✓     | ✓        | ✓          | ✓                                                                           | If I were to teach the same lesson, I would use the PhET simulation during the <i>Explore</i> phase to let students experiment with mass and velocity on their own. I would also divide them into small groups and have them adjust variables to see how momentum changes in each scenario. Afterward, we would discuss their findings together. This makes the lesson more interactive and helps students discover the concept instead of just memorizing it, just like what Sir Kim did. |

## OBSERVATIONS OF TEACHING-LEARNING IN ACTUAL SCHOOL ENVIRONMENT

### Episode 11 Utilizing Teaching-Learning Resources and ICT

|                           |                                                                                                                                        |   |   |   |   |   |   |                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------|---|---|---|---|---|---|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| YouTube Video             | Uses animations and real-life examples to explain momentum and impulse.                                                                | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | I would use this video at the start of the lesson to catch the students' attention. Before playing it, I would ask them what they think momentum means in real life, then let the video confirm or correct their ideas. After watching, I would ask quick questions like, "What did you notice?" or "Can you give another example of momentum?" This helps them relate the topic to familiar things and keeps the discussion lively. |
| Laptop (Teacher's Device) | Used by the teacher to present slides, videos, and PhET simulations. Serves as the main instructional tool for multimedia integration. | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | I would use the laptop as my main tool for presenting visual materials like slides, videos, and the PhET simulation. It allows me to switch easily between different resources and keep the lesson organized. I would also let the students come up and interact with the simulation on the laptop, so they feel more involved in the activity.                                                                                      |

### REFLECT

1. Describe your experience in surfing the internet for appropriate electronic resources for the class? What made is easy? Difficult?

While searching for electronic resources online, I realized how helpful technology can be in improving the way we teach and learn. It was quite easy to find materials because there are already so many free and accessible platforms like YouTube, PhET, and different educational sites that offer simulations and visual lessons. What made it a bit difficult, though, was choosing which ones were accurate and aligned with the learning objectives. There were a lot of videos that looked interesting but lacked proper explanations or were too long. I learned

## OBSERVATIONS OF TEACHING-LEARNING IN ACTUAL SCHOOL ENVIRONMENT

### Episode 11 Utilizing Teaching-Learning Resources and ICT

that as a future teacher, I need to be selective, not everything on the internet is useful just because it's available.

2. How did you choose which electronic resources to include here? What did you consider? Explain. Which of the new trends in Education 4.0 would you like to explore more for your work as a teacher? Why?

I chose the electronic resources based on how relevant they were to the topic and how well they can help students understand momentum in an interactive way. I considered accuracy, clarity, and engagement because students easily get bored if the materials are too technical or wordy. I made sure that the resources encourage participation rather than just passive watching. Among the trends in Education 4.0, I'd like to explore more about *augmented and virtual reality* in science lessons. Because I think it would be amazing for students to see and experience scientific concepts up close, like simulating collisions or energy transfers in a virtual lab, and it seems like it is within reach because we are now living in the 21<sup>st</sup> century. It would be a fun and immersive way to make lessons more meaningful and memorable.

3. Reflect on your technology skills. What skills do you already have, and what skills would you continue to work on to be better at utilizing education 4.0 resources?

Right now, I'm confident with basic computer skills like making PowerPoint presentations, editing videos, and using online platforms like Google Classroom and Canva. But I know I still have a lot to improve, especially when it comes to integrating more advanced tools like Microsoft excel, simulations, and other data analysis software commonly used by the teachers. I also want to practice creating interactive lessons using technology instead of relying too much on traditional slides. I have realized that being a teacher in this generation means being flexible and open to learning new tools, because technology is like waves on the ocean, it keeps on coming and improving itself so I have to keep on what is the trend. To keep up with Education 4.0, I need to keep updating my skills and be willing to explore new digital resources that can make my teaching more engaging and student-centered.

## OBSERVATIONS OF TEACHING-LEARNING IN ACTUAL SCHOOL ENVIRONMENT

### Episode 11 Utilizing Teaching-Learning Resources and ICT

#### OBSERVE, ANALYZE, REFLECT

##### Activity 11.4

##### Professional Development Through MOOCs

Resource Teacher: Sir Kim Paolo Armin A. Torcelino VI Teacher's Signature: 

School: Abaño Laboratory Grade/Year Level: Grade 10 Subject: Science Date: 09/29/25

#### OBSERVE

To realize my **Intended Learning Outcomes**, I will work my way through these steps.

**Step 1:** Review the seven domains of PPST and identify competencies I like to develop more.

**Step 2:** Visit sites of MOOC providers and explore the courses offered that are relevant - to PPST domains I want to work on.

**Step 3:** Reflect on how I can continue developing my skills through MOOCs.

#### OBSERVE

1. Get a copy of the PPST and go over the competencies.
2. On the second column, write the competencies you like to work on.
3. Search for MOOCs in the internet which are relevant to the competencies you identified. You may try these sites:

- <http://www.teachthought.com/technology/list-75-moocs-teachers-students/>
- [http://www.educationworld.com/a\\_curr/moocs-best-teachers-free-online-courses.html](http://www.educationworld.com/a_curr/moocs-best-teachers-free-online-courses.html)
- <http://www.forbes.com/sites/skollworldforum/2013/06/10/moocs-forteachers-learners-too/>
- <https://www.mooc-list.com/categories/teacher-professional-development>

### ANALYZE

From among the MOOCs you explored, pick at least three which you believe are the most appropriate for you. Describe the MOOCs below.

1. MOOC Title: **Technology for Teaching and Learning**

Provider: UPOU MODeL (UP Open University)

Objective of the MOOC: To help teachers effectively use technology tools, simulations, and multimedia in the teaching-learning process to make lessons more interactive, engaging, and student-centered.

Content Outline:

- Introduction to ICT integration in education
- Using digital tools and simulations in Science teaching
- Designing technology-enhanced lessons
- Evaluating and reflecting on technology-based instruction

Why did you Pick this MOOC:

I chose this MOOC because I really want to improve in using technology in my future Science teaching. I have seen how students become more interested when lessons involve visuals or interactive simulations. I am sure that this course will help me make my lessons more engaging while also preparing me to handle modern classrooms that rely on digital learning tools. I like it also because it is governed by University of the Philippines which is known for its quality education. I believe this skill is essential for teachers today, especially in the 21st-century classroom setup.

## OBSERVATIONS OF TEACHING-LEARNING IN ACTUAL SCHOOL ENVIRONMENT

### Episode 11 Utilizing Teaching-Learning Resources and ICT

#### 2. MOOC Title: Curriculum Design for Learning Success

Provider: Coursera

Objective of the MOOC: To equip teachers with the knowledge and skills to design well-structured and outcome-based lesson plans that align with national standards and promote meaningful learning.

Content Outline:

- Understanding outcome-based education
- Creating clear learning outcomes and objectives
- Planning lessons and activities that support student success
- Evaluating and improving curriculum design

Why did you Pick this MOOC:

I picked this because I want to strengthen how I plan lessons that are aligned with learning outcomes. When I was doing my lesson plans before, I realized that it is not just about filling up templates that sometimes given to us by our teacher, but about making sure everything connects. From the objectives, activities, and assessments, it must all aligned. This MOOC will help me make my future lesson plans more purposeful and student-focused, something I really want to get better at as I train to become a teacher in the future.

#### 3. MOOC Title: ODeL for Teachers

Provider: UPOU MODeL (UP Open University)

Objective of the MOOC: To introduce teachers to Open and Distance eLearning (ODeL) principles, practices, and tools that support flexible teaching and online instruction.

Content Outline:

- Principles of ODeL and flexible learning
- Designing and managing online classes
- Using digital platforms for communication and assessment
- Ensuring learner engagement and support in virtual settings

Why did you Pick this MOOC:

I chose this one because I want to be ready for any kind of learning setup I need to face in the future, whether face-to-face, hybrid, or online. After seeing how classes shifted during the pandemic, I realized how important it is for teachers to be adaptable and tech-smart. And again, I like it because it is governed by University of the Philippines which is known for its quality education. For that reason, I think this course will prepare me to handle distance learning efficiently while still making lessons meaningful and engaging. It is something I see myself applying a lot in the future, especially as education continues to evolve with technology.

## OBSERVATIONS OF TEACHING-LEARNING IN ACTUAL SCHOOL ENVIRONMENT

### Episode 11 Utilizing Teaching-Learning Resources and ICT

#### REFLECT

1. How can MOOCs help you in your future career as a professional teacher and as a lifelong learner?

MOOCs can really help me grow both as a teacher and as a lifelong learner because they could give me access to quality education anytime and anywhere. As a future teacher, I can use MOOCs to keep myself updated with new teaching methods, educational technologies, and current trends in Science teaching or the education itself. They can allow me to learn from experts around the world without leaving home, which is very practical and amazing to think about. I also like how MOOCs encourage continuous learning, they remind me that education doesn't stop after graduation. As I move forward in my teaching career, I hope to take up these kinds of online courses that will help me improve, adapt, and stay motivated in this fast-changing world of education.

2. What did you learn from the way the providers use technology to teach in the MOOCs?

Even though I haven't personally enrolled in a MOOC yet, I have observed that these online courses make great use of technology to make learning more interactive, flexible, and enjoyable. From what I have seen, MOOC providers use videos, quizzes, discussions, and simulations to explain lessons clearly and keep the learners engaged. They often present topics in short but meaningful segments, which I think helps maintain focus and improve understanding.

3. How will you prepare yourself for MOOCs, as a learner, and as a teacher who may someday teach a MOOC?

As a learner, I will prepare myself by managing my time well and staying disciplined in completing online lessons. I have realized that online learning requires self-motivation since there is no one constantly reminding you unlike in face-to-face. I will also make sure I have the basic tech skills needed to navigate platforms and participate actively in discussions. While if I ever get the chance to teach a MOOC when I became a teacher, I will prepare by designing lessons that are clear, organized, and engaging even if it is online, just like the ones I have experienced during the pandemic. I will also focus on using visuals, short activities, and real-life examples so learners from different places can still connect with the lessons. I believe that having this kin of technology is a privilege, and I want to be able to maximize it and teach in a way that makes learning accessible to everyone, no matter where they are.

## OBSERVATIONS OF TEACHING-LEARNING IN ACTUAL SCHOOL ENVIRONMENT

### Episode 11 Utilizing Teaching-Learning Resources and ICT

#### SHOW Your Learning Artifacts

1. Include here pictures/illustration of the materials used by the teacher. Put your comments/ annotations about what you observed.

The resource teacher effectively used both a laptop and a projector to guide the presentation and support the discussion. Together with this, he also master the use of visuals and real-life examples made the lesson clearer and more interactive. It is amazing to see how he balanced technology with direct interaction, he still manage to engaged the class by asking questions and giving examples while using the projector. It showed how technology, when used properly, can enhance rather than replace good teaching.

2. Visit [www.teachnology.com](http://www.teachnology.com) or other teacher resource websites. Print useful instructional materials (worksheets, visual aids, flashcards, rubrics, etc.) and include them here. Indicate how they might be useful considering your major or area of specialization.

When I explore Teachnology.com, I found a “Plant Parts” Science Worksheet that caught my attention, it is a key to correction so when using, we have to block the given answers. This worksheet asks the students to label the different parts of a plant, such as the flower and leaf, and identify their functions. I chose this activity because it aligns perfectly with my major in Science Education, particularly in Biology topics. I think this worksheet could help students visualize and understand how each part of a plant contributes to its growth and survival. I find it effective because it can be used both as an introductory activity and as a review tool. Moreover, it somehow encourages students to recall information while enhancing their observation and comprehension skills. It is also easy to understand.

3. Visit [www.edudemic.com/50-educationtechnology-tools-every-teacher-should-know-about/](http://www.edudemic.com/50-educationtechnology-tools-every-teacher-should-know-about/)

Explore and enjoy the fantastic education tools. Try them out. Describe what you discovered and share how these tools can be helpful to you. as a teacher

I explored several tools from the list, but the ones that caught my attention the most were **Kahoot**, **Canva**, and **Google Classroom**. I chose these because I am already familiar with them and have encountered them countless times during my high school and early college years. I can also maneuver them easily, which makes them even more useful for me as a future teacher. From my experience, I know that **Kahoot** can make lessons more exciting through game-based quizzes that are perfect for quick reviews or formative assessments like from when we use it when we deliver our topic discussions in our early years in college. On the other hand, the **Canva** allows teachers to design creative visual aids, infographics, and posters that make lessons more appealing and easy to remember. And lastly, **Google Classroom** helps in organizing class materials, assignments, and announcements efficiently. These tools are very helpful because they promote interaction, creativity, and collaboration both inside and outside the classroom.

#### **The impact of interactive Smart boards on students' learning in secondary schools in Botswana: A students' perspective**

**Gabatshwane Tsayang, Tshepo Batane & Aaron Majuta**  
**University of Botswana, Botswana**

#### **ABSTRACT**

This study investigates the impact of the use of SMART boards on students' learning in schools in Botswana and is guided by the Context Input Process Product (CIPP) Evaluation Model. The study adopts a mixed methods design that employed interviews, observations and a questionnaire to obtain data. The results show that the use of the SMART boards enabled a variety of learning experiences that promoted students' engagement and interactivity, and increased levels of motivation and improvement in academic achievement. These findings indicate that SMART technologies have the potential to transform educational practices in Botswana, as it endeavors to provide its children with a quality education that matches the best global standards, and simultaneously recasts itself into an innovative, efficient and adaptive economy that can compete in the global world of the 21st century.

**Keywords:** *SMART boards, evaluation, student achievement, motivation and student engagement.*

**Gadget:** Interactive Smartboard

I read an article titled “The Impact of Interactive Smart Boards on Students’ Learning in Secondary Schools in Botswana: A Students’ Perspective” by Gabatshwane Tsayang, Tshepo Batane, and Aaron Majuta from the University of Botswana. To be honest, I tried to find a similar study about this in the Philippines but found none, so I decided to use this one instead since it shares the same focus, only in a different country. The study showed that the use of SMART boards promotes student engagement, interactivity, and motivation, leading to better academic performance. If we look at the

data, it really works effectively in Botswana, and I believe it can also be applied successfully here in the Philippines.

If only it would be possible to have Interactive Smartboard in every classroom in the Philippines, I would really want to learn more about this gadget because it allows both teachers and students to write, draw, and manipulate objects directly on the board. It can display videos, and presentations while letting students interact with the lesson in real time. For teaching Science, this tool would be very useful in demonstrating processes like the water cycle or chemical reactions visually and interactively. I believe that learning to use a Interactive Smartboard effectively will help me make my future lessons more engaging, modern, and hands-on, just like what the study has proven.
