OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 12

SPARK Your Interest

Assessment is an essential part of the instructional cycle. The instruction cycle consists of 1) setting the intended learning outcome/s, 2) selecting a teaching methodology, strategy, and activity that are aligned to the learning outcome and topic that are developmentally appropriate to the learners, and 3) assessment itself. Assessment is the part of the instructional cycle that determines whether or not the intended learning outcome has been attained and so necessarily, the assessment task must be aligned to the intended learning outcome.

In a lesson on assessment, we can speak of assessment *for* learning, assessment *of* learning, and assessment *as* learning.

This episode will dwell on assessment *for* learning and assessment *as* learning. Assessment *for* learning is referred to as **formative assessment** while assessment *as* learning is referred to as **self-assessment**.

TARGET Your Intended Learning

At the end of this Episode, I must be able to:

- Demonstrate knowledge of the design and use of formative assessment; and
- Explain the importance of formative assessment.

DISCOVER the Learning

Essentials

- In Outcome-based Teaching-Learning/Competency-based Teaching/Teaching by Objective, we ensure that the intended outcome/competency/ objective is attained at the end of the lesson and so while we are still in the process of teaching, we do check learners' understanding and progress.
- If we find out that the learners' failed to understand prerequisite knowledge and skills, we reteach until learners' master them. This is called **FORMATIVE** assessment, assessment while the learners are being **formed** or taught. It is assessment in the midst of instruction.
- Formative assessment is also referred to as assessment *for* learning, Assessment *for* learning simply means we do assessment to ensure learning.

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 12

- We do not wait for the end of the lesson to find out if learners understood the lesson or not because if it is only at the end of the lesson that we discover that the learners did not understand the lesson, we have wasted so much time and energy teaching presuming that everything was clear, only to find out at the end of the lesson that the learners did not understand the lesson at all. This means that we have to reteach from the very beginning, something that we could have saved ourselves from doing had we given time to find out if the lesson was understood while still teaching. Assessment for learning encourages peer assessment.

OBSERVE, ANALYZE, REFLECT

Activity 12.1

Observing Assessment FOR Learning Practice (Formative Assessment)

Resource Teacher: Sir Kim Paolo Armin A. Torcelino VI Teacher's Signature: 

School: Abaño Laboratory Grade/Year Level: 10 Subject: Science Date: 09/29/25

1. Observe what the Teacher does or listen to what the Teacher says to find out if the students understood the lesson while teaching-learning is in progress.

What Teacher Said	Tally	Total
"Class, listen"	✓Before the class started. ✓During the class discussion. ✓When the teacher is announcing the group project.	3
"Did you get the idea?" / "Did you understand?"	✓After the reporters' discussion.	1

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 12

2. Did the teacher ask the class “Did you understand”? If she did, what was the class’ response?
Yes, the teacher asked the class “Did you understand?”, and the class responded with a resounding yes. Every time the class had finished discussing a certain topic, the resource teacher always ask them if they understand the discussion, followed by if they have any questions or any clarifications about the topic that had been discussed.

3. Did the students make the teacher feel or sense they did not understand the lesson or a part of the lesson? How?
Yes, based on my observation after the class had their topic discussion, most of them often have this aura of cluelessness which the resource teacher can automatically sense.

4. If they did, how did the teacher respond?
The resource teacher can grab the students out of the cluelessness state by asking questions about their discussion, this makes them back to be engaged and helped them recall what had been discussed.

5. Were the students allowed to ask for clarification? How was this done?
Yes, every after their topic discussion the class is allowed to ask any questions or clarifications regarding the topic. What I admire about the resource teacher is his perseverance, the way he encourages the students to ask questions is like urging them to dive deep on the topic, but in a positive and peaceful manner.

6. If she found out that her lesson was not clearly understood, what did the teacher do? Did you observe any of these activities? Please check.

☒ Peer tutoring (Tutors were assigned by the teacher to teach one or two classmates.

☒ Each-one-teacher-one (Students paired with one another).

☒ Teacher gave a Module for more exercises for lesson mastery.

☒ Teacher did re-teaching.

Others, please specify

7. She engaged herself in re-teaching, how did she do it? Did she use the same teaching strategy? Describe.

At the time of my observation, the resource teacher did not engage in re-teaching, therefore there are no data or information to answer this and the also the following questions.

8. While re-teaching by himself/herself and/or with other students-turned tutors, did the teacher check on students’ progress?

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 12

If yes how?

ANALYZE

1. Why should a teacher find out if students understand the lesson while teaching is in progress? It is not better to do a once-and-for-all assessment at the completion of the entire lesson? For me, it is better to check if students understand while the lesson is ongoing because it makes the flow of learning smoother. If a teacher waits until the end of the discussion to conduct a once-and-for-all assessment, it might be too late to fix any confusion. Asking the students while the discussion is ongoing helps the teacher see if students are really following the lesson step by step, and at the same time, the students don't pile up their misunderstandings until the last part.

2. Why is not enough for a teacher to ask, "Did you understand, class?" when he/she intends to check on learners' progress? It is not enough because most of the time students just say "yes" even if they don't really understand or they have a question but don't have the courage to ask. Maybe they are shy or afraid to admit it. Instead, the teacher should check their progress by asking follow-up questions, letting them explain in their own words, or giving small activities that show if they really understood the topic being discussed.

3. Should teacher record results of formative assessment for grading purposes? Why or why not? I think formative assessment should not always be recorded for grades because its purpose is to guide learning, not to add pressure. It is more for the teacher to see where the students are struggling and to help them improve. But in my experience as a student, at some point some results can be recorded if it will also show the students that their efforts are recognized, as long as it is fair for all of the students and not too strict.

4. Based on your observations, what formative assessment practice worked? Based on my observation, the resource teacher's way of asking questions after the discussion really worked. He always ask the students if they have any questions or clarifications, but almost all the time the students will answer "none". But this don't stop him to follow up some questions to test the students if they really listened and understand the discussion. It helped the students recall and reflect on what was taught. It's simple but effective because it keeps the students engaged and makes them participate, especially when they look clueless at first but then remember the lesson when asked.

5. For formative assessment, why is peer tutoring in class sometimes seen to be more effective than teacher himself/herself doing the re-teaching or tutoring?

FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 12

Based on my observation, sometimes peer tutoring works better because students feel more comfortable asking their classmates than the teacher. They are in the same level of thinking, so they can explain things in a way their peers can understand better and faster. It also builds cooperation in the class and makes learning more interactive rather than one-sided.

6. Could an unreasonable number of failures at the end of the term/grading period be the attributed to the non-application of formative assessment? Why or why not?

Yes, it could be. If formative assessment is not applied, then the teacher may not notice early on that students are having a hard time. By the end of the grading period, it's already too late because the students had no chance to be guided while the lesson was still in progress. It is because formative assessment acts like a checkpoint that prevents students from being left behind while the discussion is ongoing.

REFLECT

- Formative assessment is tasting the soup while cooking. Reflect on this and write your reflections.
- Should you record results of formative assessment? Why or why not?

For me, formative assessment being compared to “tasting the soup while cooking” means that it is really about checking the progress of learning while it is still ongoing. Just like when you taste the soup, you can still adjust the flavor, add what is missing, or fix what doesn't seem right, the teacher also uses formative assessment to see if the students are following and to make changes right away if they are struggling. Because of this, I think formative assessment should not always be recorded for grading purposes since its main goal is to guide improvement, not to pressure students with scores. But at the same time, some parts can be recorded if it will motivate students to put in effort and show that their progress is valued as long as it is fair for all the students. In the end, formative assessment is more about support and adjustment rather than judgment.

SHOW your Learning Artifacts

1. My Accomplished Observation Sheet

My Accomplished Observation Sheet

Observation of Formative Assessment Practices

- **Resource Teacher:** Sir Kim Paolo Armin A. Torcelino VI
- **School:** Abaño Laboratory
- **Grade Level:** 10
- **Subject:** Science

Key Observations:

- The resource teacher consistently checked for understanding throughout the lesson by asking "Did you understand?"
- Students were encouraged to ask questions and seek clarifications after each topic discussion
- Teacher used follow-up questions to assess genuine comprehension when students appeared confused
- Formative assessment strategies observed included:
 - ✓ Peer tutoring (tutors assigned to teach classmates)
 - ✓ Each-one-teach-one (students paired with one another)
 - ✓ Module provision for additional exercises
 - ✓ Teacher re-teaching when necessary
- Teacher demonstrated perseverance in encouraging student participation and deeper engagement with the material

2. My Analysis

After answering all the questions, I realized that formative assessment plays a huge role in making teaching and learning more meaningful. It is not just about giving quizzes or checking who got the right answer, it is about guiding students as they learn. A teacher who constantly checks for understanding during the lesson can easily adjust their teaching style to meet students' needs, instead of waiting until the end when it's already too late. I've seen how this works during classroom observations, when the resource teacher ask questions in between, students stay alert and connected to the discussion.

It also struck me that simply asking "Did you understand?" isn't enough. Many students, including me before, would just nod even when we were lost. That's why teachers need to use different techniques, like follow-up questions, quick recaps, or peer discussions to know if learning really happens.

Another thing I realized is that formative assessment isn't about giving grades, it is about giving chances. It helps both teachers and students see where improvements are needed. Peer tutoring also stood out to me because I've experienced it myself, sometimes a classmate's simple explanation makes everything click.

FS1

FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 12

In the end, I've learned that problems often happen when the teachers skip formative assessment. It is like driving without checking your direction, you might only realize you're lost when you're already far from the right path. As a future teacher, I want to apply formative assessment consistently so learning becomes a journey where no student gets left behind.

3. My Reflection

After observing the class, I realized that formative assessment truly helps make learning more meaningful. The way Sir Kim checked for understanding and encouraged questions showed me that assessment is not just about grades—it's about guiding students every step of the way. As a future science teacher, I learned that constantly checking if students understand the lesson can make learning more engaging and effective. I want to apply this in my future classroom to make sure no student gets left behind.

4. Snapshots of peer tutoring or other activities that show formative assessment in practice.

The picture shows the students actively participates during the class discussion as they raise their hands to share answers and ideas. This shows formative assessment through questioning, allowing the resource teacher to check their understanding in real time.

The resource teacher interacts closely with students during their group work, guiding them through the activity. This moment reflects how feedback and informal assessment help learners to stay on track and clarify their thoughts.

Observing Assessment *As* Learning Practices (Self-Assessment)

Resource Teacher: Sir Kim Paolo Armin A. Torcelino VI Teacher's Signature: 

School: Abaño Laboratory Grade/Year Level: 10 Subject: Science Date: 09/29/25

TARGET Your Intended Learning

At the end of this Episode, I must be able to:

- Demonstrate knowledge of the design and use of formative assessment; and
- Explain the importance of formative assessment.

REVISIT the Learning Essentials

- Assessment *as* learning means assessment is a way of learning.
- It is the use of an on-going self-assessment by the learners in order to monitor their own learning.
- This is manifested when learners reflect on their own learning and make necessary adjustments so that they achieve deeper understanding.
- Assessment *as* learning encourages students to take responsibility for their own learning.
- It requires students to ask questions about their learning.
- It provides ways for students to use formal and informal feedback and self-assessment to help them understand the next steps in learning.
- It encourages self-assessment and reflection.

Episode 12

OBSERVE

Observe a class and find out practices that reflect assessment *as* learning. Record your observations.

Teacher	My Observation
1. Did teacher provide opportunities for the learners to monitor and reflect on their own learning?	Yes, I observed that the teacher gave the students chances to reflect on what they learned, especially after a discussion. He would often ask them to look back at the topic and think if they really understood it or if they still had questions or any clarifications regarding the topic. This simple act allowed them to monitor their own understanding.
2. What are proofs that student engaged in self-reflection, self-monitoring and self-adjustment?	From what I saw, some students would admit when they have some confusion and would ask some questions to clarify any of their misunderstandings. I think, this action showed that they were monitoring themselves and somehow also reflecting.
3. Did students record and report their own learning?	I did not observe any.

4. Did teacher create criteria with the students for tasks to be completed or skill to learn?

I did not observe any.

Analyze

1. If the student is at the heart of all assessment, then all assessment should support student learning. Do you agree? Why or why not?

Yes, I agree because the main reason we assess is to help students learn better. If assessments do not support learning, then they just become a way of giving scores, it's just a mere numbers and not really helping the student grow. When the student is placed at the center, every type of assessment, whether it's for grades or feedback, should guide them to improve and understand more.

2. Does assessment *as* learning have the same ultimate purpose as assessment *for* learning?

For me, they share the same ultimate purpose, which is to improve the learning of the students, but they differ in how they do it. Assessment for learning is more on the teacher's side, using the results to adjust teaching and guide the students. Assessment as learning, on the other hand, makes the students reflect on themselves and be responsible for their own learning. Both still aim for the same end goal, which is to help the student learn effectively.

Episode 12

Reflect

The primary purpose of assessment is not to measure but to further learning. Reflect on your personal experience of assessment in school. Were you given opportunities for self-assessment? If yes, what was the impact on your learning?

For me, I believe the primary purpose of assessment is not simply to measure but to further learning. Back when I was in high school, I often experienced assessments that were focused on scores, like quizzes and tests, and sometimes I felt I was only studying to pass. But when I think about it, the times that really helped me learn were when I was given the chance to reflect on my own work and assess myself.

I remember clearly during my college years with my teacher, Ma'am Saenz. I got to be her student plenty of times, and in her class she often gave us opportunities for self-assessment. For example, whenever we conducted a tests or a summative tests we had this practice of checking our own papers. At first, I thought it was just a simply normal and maybe it was just her style and nothing more, but it turns out I was wrong, it actually helped me realize my mistakes right away and understand why my answers were wrong. Aside from that, she also had us do group ratings, especially when we worked on projects or group activities. In those moments, we didn't just assess the output but also reflected as a group on how we worked together and how each of us contributed.

Those experiences really had an impact on my learning. Instead of just waiting for the teacher to give me a score, I became more active in recognizing what I did right and what I needed to improve. It also taught me to be responsible and honest because self-assessment required me to be truthful about my own performance. I realized that assessment can be more than numbers, it can also be a tool to help me grow, both individually and even as part of a group.

Episode 12

4. Did teacher create criteria with the students for tasks to be completed or skill to learn?

I did not observe any.

2. My Analysis

After reviewing my observation of Sir Kim's class, I realized that both formative and self-assessment work together hand in hand, they play a vital role in helping students become more aware and responsible for their learning. The resource teacher didn't just teach and move on right away, he consistently guided the students to reflect, ask questions, and connect lessons to their own understanding. What moved me is when I saw how assessment was not used to judge but to support, this kind of approach is what every classroom needs. In this kind of classroom, the moment students admitted confusion or asked for clarifications it showed that learning was truly happening because they were learning to monitor themselves.

It is inspiring how the classroom became a space where both teacher and students worked together to improve. It reminded me that real teaching is not just about giving knowledge, it is about guiding learners to recognize their own growth. As a future teacher, this observation taught me that effective assessment is not just a task, but a continuous learning process between the teacher and students that leads to deeper and more meaningful learning.

3. My Reflection

After completing my observation sheet and analysis, I came to realize that formative assessment is truly the heart of effective teaching. Watching how Sir Kim handled his class showed me that assessment doesn't always have to be formal or graded, it can simply be through questions, discussions, or even peer activities. I saw how he used small yet powerful techniques like asking follow-up questions, and giving additional exercises to ensure that everyone keeps up with the lesson.

What stood out to me the most was how the classroom felt active and inclusive. It reminded me of what my past teacher said, that students learn best when they are given space to think, make mistakes, and learn again. Therefore, I realized that because of the resource teacher's consistency in checking for understanding, it made the students more confident and comfortable in expressing what they didn't understand.

For me as a future science teacher, I learned that formative assessment is not just a strategy, it is a mindset. It means being sensitive to students' learning progress and being willing to adjust your teaching to meet their needs. It is something I truly want to apply in my own classroom someday because I have seen how it builds not only knowledge but also trust and connection between the teacher and students.
