OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 16 – On Teacher's Philosophy of Education

SPARK Your Interest

One thing asked of teacher applicants in the Department of Education is to write their philosophy of education. This means that they have to write their concept of the nature of the learner, how that learner learns, and how that learner ought to live to live life meaningfully. Based on these philosophical concepts, the teacher applicants describe how they ought to relate to the learner, what to teach, and how to teach so that the learner learns and lives life happily and meaningfully.

TARGET Your Intended Learning

At the end of this episode, I must be able to:

- determine prevailing philosophies of education based on DepEd Vision and Mission statements, core values and mandate, the K to 12 Curriculum Framework and Guide, and RA 10533;
- cite teacher's teaching behaviors and the philosophies of education on which these behaviors are founded; and
- articulate my philosophy of teaching.

REVISIT the Learning Essentials

We are beneficiaries of a rich philosophical heritage passed on to us by great thinkers of the past and of the present. The way teachers relate to learners and the way they teach are anchored on philosophies of education.

Basic documents such as the vision and mission statements, core values and mandate of the Department of Education and the features of the K to 12 Curriculum as contained in Section 3 of RA 10533 and the K to 12 Curriculum Guide are manifestations or expressions of the philosophies of education of the country. They state the standards and the outcomes of education towards which all curricular activities and teaching-learning should be directed.

Episode 16 – On Teacher's Philosophy of Education

OBSERVE, ANALYZE, REFLECT

Activity 16.1

Analyzing DepEd's Philosophy of Education

Resource Teacher: Sir Kim Paolo Armin A. Torcelino VI Teacher's Signature:

School: Abaño Laboratory Grade/Year Level: 10 Subject Area: Science Date: 09/30/25

OBSERVE

- Determine prevailing philosophies of education based on DepEd Vision and Mission statements, core values and mandate, and the K to 12 Curriculum Framework and Guide.
- Study the DepEd Vision and Mission statements, Core Values, and Mandate.
- Read the features of the K to 12 Curriculum based on the Kto12 Curriculum Framework and Guide and Sec 5 of RA 10533.
- Accomplish the Table below by answering this question: Which philosophies are expressed?
- Cite relevant statements to back up an identified philosophy of education. You are given an example.

Philosophies of Education	Which philosophies are expressed in the DepEd Vision, Mission Statements, Core Values, Mandate? Give proof.	Which philosophies are expressed in the K to 12 Curriculum Framework and Guide and Sec 5 of RA 10533? Give proof.
1. Essentialism — teach mastery of the basics; curriculum is prescribed; subject matter -centered there are universal, objective values; inculcate values in the subject matter.	Essentialism - The core values of maka-Diyos, maka-tao, maka-kalikasan and makabansa show that DepEd essentialist. DepEd believes in unchanging values that need to be inculcated.	Essentialism - List of standards and competencies that learners are expected to attain is the subject matter that students are expected to learn. —Essentialist
2. Perennialism — teach those that last, the classics; there are	Any proof of perennialism? - Vision of Filipinos with values rooted in moral	Curriculum emphasizes lifelong learning which remains enduring and useful.

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 16 – On Teacher's Philosophy of Education

universal values; inculcate these universal, objective values	and spiritual dimensions reflects timeless values to be passed on.	
3. Progressivism - very child-centered; teach those that interest the child; one learns by experience; learners learn by doing so teacher's teaching is experiential; values are subjective; no inculcation of values since they are subjective; instead teachers help students clarify their values	Any proof of progressivism? - Mission mentions being holistically developed and prepared for lifelong learning, which is learner-centered.	The framework promotes experiential, inquiry-based, and child-centered learning.
4. Reconstructionism - school is agent of change; schooling is preparing students for the social changes; teaching is involving the students in discussions of moral dilemmas	Any proof of reconstructionism? - Core values of maka-kalikasan and makabansa highlight responsibility in solving social and environmental issues.	RA 10533 states curriculum must be responsive to learners' and community needs for development and change.
5. Existentialism - Teachers teach learners to make a choice, to make decisions and not merely to follow the crowd; one who does not make a choice and so simply follow others do not leave meaningful life	Any proof of existentialism? - Mandate of nurturing lifelong learners implies freedom to make choices for a meaningful life.	Emphasizes learner empowerment where students take responsibility for their learning.
6. Pragmatism - That which is useful, that which is practical and that which works is what is good; that which is efficient and effective is that which is good. 6.g. showing a video clip on mitosis is more efficient and more effective and therefore more practical than teacher coming up with a visual aid by drawing mitosis on a cartolina or illustration board	Any proof of pragmatism? - Mission to produce functionally literate citizens shows focus on practical and useful knowledge.	Contextualized learning in K to 12 ensures relevance to real-life situations.
7. Rationalism - emphasizes the development of the learners' reasoning powers; knowledge comes through reason; teacher must develop the reasoning power of the learner	Any proof of rationalism? - Mandate stresses quality education that develops critical and logical thinking.	Standards and competencies highlight critical and analytical skills.

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 16 – On Teacher's Philosophy of Education

8. Utilitarianism - what is good is that which is most useful (that which brings happiness) to the greatest number of peoples;	Any proof of utilitarianism? - Vision of citizens who contribute to nation-building focuses on benefit of the greater society.	Curriculum aims to uplift the greatest number of Filipinos through education.
9. Empiricism - source of knowledge is through the senses; teacher must involve the senses in teaching-learning	Any proof of empiricism? - Mission to develop functionally literate learners implies real-world, sensory-based experience.	Hands-on and performance-based tasks highlight learning through direct experience.
10. Behaviorism - behavior is shape deliberately by forces in the environment and that the type of person and actions desired can be the product of design; behavior is determined by others, rather than by person's own free will; teacher must carefully shape desirable behavior; drills are commonly used to enhance learning. rewards reinforce learning.	Any proof of behaviorism? - Promotion of discipline and values shows shaping of learner behavior through reinforcement.	Performance standards and continuous assessment reinforce desired behaviors.
11. Constructivism —Learners are capable of constructing knowledge and meaning; teaching 4earning therefore is constructing knowledge and meaning; teacher does not just "tell" or dictate but asks learners for knowledge they construct and meaning of lesson	Any proof of constructivism? - Mission engages and empowers learners, implying they construct their own knowledge.	The framework promotes inquiry, discovery, and problem-based learning approaches.

Episode 16 – On Teacher's Philosophy of Education

OBSERVE, ANALYZE, REFLECT

Activity 16.2

Articulating My Personal Philosophy of Teaching

Resource Teacher: **Sir Kim Paolo Armin A. Torcelino VI** Teacher's Signature: _____

School: **Abaño Laboratory** Grade/Year Level: **10** Subject Area: **Science** Date: **09/30/25**

OBSERVE

- Observe how a teacher relates to every learner and how he/she proceeds with her teaching.
- Accomplish this Observation Sheet.

Here are philosophies of education. Find out which philosophies were manifested in class by observing what and how teacher teaches and relates to learners.

Philosophies of Education	Teaching Behavior (State what the teacher said, taught or did).
1. Essentialism — teach mastery of the basics; curriculum is prescribed; subject matter centered there are universal, objective values; inculcate values; subject	In what way was teacher essentialist? e.g. He/she saw to it that the students mastered basic concepts and skills. He/she inculcated values.
2. Perennialism — teach those that last, the classics; there are universal values; inculcate these universal, objective values	The resource teacher made sure students mastered the basic concepts and skills and reminded them of discipline and values during the lesson. He was essentialist by focusing on mastery of subject matter and instilling values.
3. Progressivism - very child-centered; teach those that interest the child; one learns by experience; learners learn by doing so teacher	The resource teacher connected the lesson to moral or universal truths that remain important through time.

Episode 16 – On Teacher's Philosophy of Education

teacher's teaching is experiential; values are subjective; no inculcation of values since they are subjective; instead teachers help students clarify their values	He was perennialist by emphasizing timeless lessons and universal values to his students.
4.	
5.	
6.	
7. Rationalism - emphasizes the development of the learners' reasoning powers: knowledge comes through reason; teacher must develop the reasoning power of the learner	The resource teacher asked higher-order questions, encouraged debates, and challenged students to justify answers. He was rationalist by developing reasoning and critical thinking.
8. Utilitarianism - what is good is that which is most useful (that which brings happiness) to the greatest number of peoples;	The resource teacher gave activities that promote teamwork and benefit the whole class rather than individuals. He was utilitarian by aiming for the good and happiness of the majority.
9. Empiricism - source of knowledge is through the senses; teacher must involve the senses in teaching-learning	The resource teacher used visual aids, experiments, and hands-on activities for students to observe and experience. He was empiricist by engaging the senses in the learning process.
10. Behaviorism - behavior is shaped deliberately by forces in the environment and that the type of person and actions desired can be the product of design; behavior is determined by others, rather than by person's own free will; teacher must carefully shape desirable behavior: drills are commonly used to enhance learning, rewards reinforce learning.	The resource teacher used drills, repeated exercises, praised correct answers. He was behaviorist by reinforcing desirable behaviors through practice and rewards.
11. Constructivism — Learners are capable of constructing knowledge and meaning; teaching —learning therefore is constructing knowledge and meaning; teacher does not just “tell” or dictate but asks learners for knowledge they construct and meaning of lesson	The resource teacher asked probing questions, encouraged brainstorming, and let students explain concepts in their own words. He was constructivist by letting students build their own understanding of the lesson.

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 16 – On Teacher's Philosophy of Education

1. Based on your findings and observations in Activity 16.1 and Activity 16.2, which philosophies of education are dominant in Philippine basic schools? Why do you say so?

From what I observed, the dominant philosophies in the Philippine basic schools are Essentialism and Progressivism. In the Philippine education, essentialism is very evident because above all, teachers still make sure that learners master the basic competencies and standards set by DepEd, and values formation is always integrated in the lessons. At the same time, Progressivism is also very evident because teachers often use learner-centered activities especially in teaching the science subject. It is seen in activities like group work, experiments, and performance tasks where students learn by doing. These two philosophies go hand in hand in most classrooms especially in teaching of science.

2. If there is one philosophy that schools and teachers should give more attention to, what should that be and why?

For me, schools and teachers should give more attention to Constructivism. I say this because although there are already learner-centered approaches, many lessons are still too focused on content delivery. While, I found constructivism to be more open in administering the diversity of the learners, allowing the students to truly engage, make sense of the lesson in their own way, and connect it to real-life situations. For example, in a science classroom, instead of merely explaining photosynthesis, the teacher can ask students to design a simple experiment comparing how plants grow under sunlight and shade, letting them observe, record, and discuss their findings. I think, if teachers highlight this more, learners will not just memorize the lesson but also understand it and apply what they have learned in their daily life.

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 16 – On Teacher's Philosophy of Education

What is your philosophy of teaching? This describes what you believed you should teach, how you should teach and how you should relate to others in school — with the learners, your colleagues, your superiors and all other stakeholders. Write them down. This is your title, “My Philosophy of Teaching.”

My Philosophy of Teaching

These may be of help:

I believe that the learner (concept of the learner)

I believe that I should teach the learners... (what)

By..... (how)

I believe that I (how should you relate to learners, colleagues, superior, parents and other stakeholders)

I believe that every learner is capable of growth and change if given the right guidance and opportunities. Each learner is unique therefore have their own strengths, weaknesses, and experiences. I believe that, as a teacher I should teach the learners not just the content of science but also the values, skills, and attitudes that will help them become responsible citizens. For me, education should not only be about knowledge and how smart an individual is in written assessments, but also about character and preparing them for real life.

By using learner-centered strategies, hands on activities, and meaningful discussions, I think I can make the lessons more engaging and relevant. I also believe that giving every student a chance to explore, question, and construct their own understanding is significantly better than just giving emphasis on mere memorization. I believe that I should treat the learners with patience, fairness, and empathy, while motivating them to do their best. And when it comes to my colleagues and superiors, I should work with respect and cooperation because for me, teaching is never a one-man job. Together with them, the parents and other stakeholders, I should build open communication and partnership, since their support is also very important in shaping the learners.

Overall, my philosophy of teaching is mainly Constructivism, since I believe learners must be given the chance to build their own understanding and connect it to real-life situations. At the same time, my view also reflects Progressivism, because I value learner-centered and experiential strategies, and a touch of Essentialism to complete it, because I believe in the importance of teaching values and character alongside knowledge.

He was constructivist by letting students build their own understanding of the lesson.

My Philosophy of Teaching

For me, teaching is more than just classroom discussions and just trying to explain the lessons to the students, it is about guiding them to see the world differently and helping them realize that they are capable of learning and improving every day. I believe every learner is unique, with their own strengths, learning pace, and stories to tell. As a future teacher, I want to be someone who listens, understands, and at the same time, inspires them to bring out their best.

I want my future classroom to be a safe and meaningful space where students can explore, ask questions, and learn through real experiences. I believe that learning becomes more powerful when they discover things on their own and connect them to life outside the classroom. At the same time, I also value the teaching of discipline, respect, and kindness. Because for me, knowledge will only matter if it is guided by good character.

Considering these beliefs of mine, I think my philosophy of teaching is mainly Constructivist, since I believe students learn best when they build their own understanding. But it also reflects Progressivism and Essentialism, because I value hands-on learning while still teaching important values and basic skills that will help my future students in navigating the world around them.
