Episode 2 Learner Diversity: Developmental Characteristics, Needs and Interests

SPARK Your Interest

Episode 2 provides me with an opportunity to observe learners of different ages and grade levels. It highlights the differences in their characteristics and needs as a future teacher. It is important for me to determine of learners characteristics and needs so that I will be able to plan and implement learning activities and assessments that are all developmentally appropriate.

TARGET Your Intended Learning

- The end of this episode I must be able to describe the characteristics, needs and interest of learners from different developmental levels. (PPST 3.1.1).

REVISIT the learning Essentials

Here are major principles of developmental relevant to this episode.

1. Development is relatively orderly. Development follows directional patterns, such as from the head to the toe (cephalocaudal) and from the center of the body then outwards (proximodistal).
2. Development takes place gradually.
3. All domains of development and learning - physical, social, and emotional, and cognitive - are important and they are closely interrelated. (NAEYC, 2009)
4. Development proceeds toward greater complexity, self-regulation, symbolic or representational capabilities. (NAEYC, 2009)

OBSERVE, ANALYZE, REFELCT

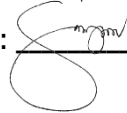

Activity 2.1

Observing learner characteristics at different stages

Name of the FS Student: Jay John C. Yasis

Course: BSED Major in Sciences

Year and Section: 4th Year Block A

Resource Teacher 1: Sir Kim Paolo Armin A. Torcelino VI Signature:  Date: 09/03/25

To realize the **Intended Learning Outcome**. Work my way through these steps:

Step 1 Observe 3 groups of learners from different levels (preschool elementary and high school).

Step 2 Describe each of the learners based on my observations.

Step 3 Validate by observation by interviewing the learners.

Step 4 compared them in terms of their interest and needs

OBSERVE

Use the **observation guide and matrices** provided for you to document your observations.

An Observation Guide for the Learner's Characteristics

Read the following statements carefully, then write your observation report on the provided space. Your teacher may also recommend another observation checklist if a more detailed observation is preferred.

Physical

- 1) Observe their gross motor skills, how they carry themselves, how they move, walk, run, go up the stairs, etc.
- 2) Observe their gross movements, clumsy or deliberate/smooth?
- 3) How about their fine motor skills? Writing, drawing, etc.

Social

- 1) Describe how they interact with teachers and other adults.
- 2) Note how they also interact with peers. What do they talk about? What are their concerns?

Emotional

- 1) Describe the emotional disposition or temperament of the learners. (happy, sad, easily cries, mood shifts)
- 2) How do they express their wants/needs? Can they wait?
- 3) How do they handle frustrations?
- 4) Describe your level of confidence as shown in their behavior. Are they self-conscious?

Cognitive

- 1) Describe their ability to use words to communicate their ideas. Note their language proficiency.
- 2) Describe how they figure out things. Do they comprehend easily? Look for evidence of their thinking skills.
- 3) What are their opportunities for problem solving? Describe how they showed problem solving abilities.

Episode 2 Learner Diversity: Developmental Characteristics, Needs and Interests

Development Domain	Preschooler Indicate age range of children observed: N/A	Elementary. Indicate age range of children observed: 7-12 Years old	High school. Indicate age range of children observed: 14-16 Years old
Physical Gross motor skills. Fine motor skills. Self help skills Others.		I observed that elementary students already have better control of their movements. Most of them can write clearly, draw neatly, and they actively join in sports or physical activities. They can also manage simple self-help tasks on their own, which shows how independent they are becoming at this stage.	High school students already have well-developed motor skills. They are capable of more complex physical activities such as sports, dance, or physically demanding task like lifting heavy objects and doing it with fine precision, specially the boys. They are independent with self-help skills and are conscious about their appearance.
Social Interaction with teachers. Interaction with classmates/Friends. Interest. Others.		I noticed that elementary learners are very interested in making friends, and they really enjoy group play. They often like to interact with their teachers, and sometimes I saw some of the Grade 1 girl students asking for small favors, like tying their hair, which shows their trust and comfort. Friendships mean a lot to them at this stage, and you can see that they are slowly learning the value of	I observed that high school students really enjoy spending time with their friends and often put their peer groups as a priority. They value the acceptance and approval of their classmates, and you can clearly see how important group activities and social interactions are to them because they enjoy teamwork and bonding. Unlike elementary learners, they are more careful when it comes to

		cooperation and teamwork.	asking help from their teachers, if it's just a small thing they can manage on their own, they usually won't ask for assistance.
Emotional Moods and temperaments, Expression of feelings. Emotional independence. Others.		I observed that elementary learners are beginning to show more control over their emotions. They are starting to express their feelings in words, and you can see them slowly learning how to manage their moods. I also noticed that when they are encouraged and supported, they become more confident in themselves.	High school students can sometimes be very sensitive and self-conscious. Their moods sometimes shift quickly, and they care deeply about how others perceive them. They want independence from adults and prefer making their own decisions. They are also learning how to express their feelings in a more mature way.
Cognitive Communication skills. Thinking skills. Problem solving skills. Others.		I noticed that elementary students are very curious and like to ask questions, sometimes even about the smallest things they see around the classroom. For example, one student asked the teacher why the globe has lines on it, which shows how eager they are to understand the world. They also enjoy hands-on learning and problem-solving activities, and their communication skills	I observed that high school students can already think critically and analyze situations more deeply. They enjoy discussions where they can share their opinions, and sometimes they even debate ideas with their classmates to defend their point. For example, one student confidently explained his side during a class when he ask about his answer on a science problem of their teacher, showing how

		are improving because they can already follow instructions well and explain their ideas more clearly.	capable they are of using logic and reasoning. They are also developing independence in their learning, often trying to figure things out on their own before asking for help.
--	--	---	--

ANALYZE

Write the most salient developmental characteristics of the learners you observe. Based on these characteristics, think of implications for the teacher.

Example:

Level	Salient characteristics observed	Implications to the Teaching-Learning process
Preschool Age range of learners observed <u>3-4</u>	Preschoolers like to move around a lot.	- Therefore, the teacher should remember to use music and movement activities not just in PE, but in all subject areas. - Therefore, teachers should not expect preschoolers to stay seated for a long period of time.
Level	Salient characteristics observed	Implications to the Teaching-Learning process
Preschool Age range of learners observed: N/A		
Elementary Age range of learners	When I observed the elementary learners, I noticed that they were very curious and kept asking questions about almost everything.	The teachers should encourage questioning and provide clear, simple explanations.

Episode 2 Learner Diversity: Developmental Characteristics, Needs and Interests

observed: 7-12 years old	They easily got distracted, especially when the lesson dragged on for too long, but they quickly became engaged again when the activity was fun and interactive. They really enjoyed hands-on tasks and games, which made them more focused and excited to learn. This shows that teachers need to encourage curiosity by welcoming questions, keep lessons short and engaging, and include activities that let the learners participate actively.	- The lessons should be broken into shorter, engaging parts to sustain attention. - The teachers should use interactive activities, games, and experiments to make learning enjoyable.
High School Age range of learners observed: 14-16 years old	During my observation of high school students, I saw how much they enjoyed talking and working with their peers. They were also very self-conscious, and I could tell that peer approval mattered a lot to them. Unlike the younger ones, they were starting to show more critical thinking and were not afraid to express their own opinions. This means that teachers should make use of group activities to promote collaboration, create a supportive environment to protect their self-esteem, and prepare lessons that challenge their reasoning and decision-making skills.	- The teachers should design group activities that encourage collaboration and teamwork. - The teachers must be sensitive to students' self-esteem and provide a supportive classroom environment. - The lessons should include activities that challenge their reasoning, problem-solving, and decision-making skills.

FIELD STUDY

ON BECOMING A TEACHER

Episode 2 Learner Diversity: Developmental Characteristics, Needs and Interests

- 1) While you were observing the learners, did you recall your own experience? Says when you were their age? What similarities or differences do you have with the learners you observe?

Yes, while observing the learners, I suddenly remembered my own experiences back when I was their age. Seeing the high school students hanging out with their friends reminded me of how much I also valued my barkada during those years. It was in Grade 8 that I met my best friends, and those times were filled with laughter and memories that still make me smile whenever I think about them. I'm really grateful that those people are still my friends today, and our bond has only grown stronger through the years. What I saw in those students reminded me of myself and my own group back then, and I hope their friendships turn out to be just as good as my experience or maybe even better. The only difference is that unlike them now, I think I was a bit quieter and less outspoken when it came to expressing my opinions in class.

- 2) Think of a teacher you cannot forget for positive or negative reasons. How did she/he help or not help you with your needs (physical, emotional, social and cognitive)? How did it affect you?

One teacher I can never forget was my high school science teacher, Ma'am Torres. She was not a strict teacher, in fact, she became one of the biggest reasons why I decided to pursue becoming a science teacher. She hooked me into the world of science and made me realize that even if the subject is hard, it can also be enjoyable. Her experiments fascinated me, almost like she was opening the door and welcoming me into the world of science. I will never forget how she related games to the lessons and how her random trivia made every class exciting.

When it comes to my needs, she really helped me in many ways. Emotionally, I felt supported because even if she corrected us, she always encouraged us whenever we did well. Socially, she pushed us to work in groups, which helped me gain confidence in interacting with my classmates. Cognitively, her clear explanations and unique teaching style made me appreciate science even more and inspired me to dream of teaching it one day. Physically, she would often let us move around during activities and experiments, which made learning less tiring and more engaging.

Looking back, Ma'am Torres had a big impact on me, not just in shaping my confidence inside and outside the classroom, but also in inspiring me to someday be a good science teacher.

Episode 2 Learner Diversity: Developmental Characteristics, Needs and Interests

3.) Share your other insights here.

From this observation, I realized how important it is for teachers to really understand the developmental stage of their students. What works for elementary learners may not work for high school students, and vice versa. I also saw how each stage has its own strengths elementary learners showing their eagerness to learn and high school students starting to think more critically and form their own opinions.

But one thing I also learned is that, although they have different needs, both groups of learners just need a place where they feel seen and valued. As teachers, we should always remember to be kind to our students because we don't really know what they might be going through. Instead of scolding them harshly, it's better to make them feel that they are worthy and capable, and that there is always room for improvement. For me, that's one of the most important parts of teaching, not just to educate, but also to make students feel that they matter.

SHOW Your Learning Artifacts

Which is your favourite theory of development. How can this guide you as a future teacher? Clip some readings about this theory and paste them here.

My Favorite Theory of Development

My favorite theory of development is Vygotsky's Sociocultural Theory. I like this theory because it focuses on the idea that learning happens best with the help of others, especially through guidance and collaboration. For me, it makes sense because when I was a student, I really learned more when my teacher or even my classmates supported me and explained things in a way I could understand. It showed me that we don't really learn alone, we learn better when we are connected to others. As Vygotsky said, "Through others we become ourselves," and it really reminds me of the saying, "Two heads are better than one."

As a future teacher, this guides me to remember that my role is not just to stand in front of the class and give lessons, but to really guide and walk with my students in their learning journey. It reminds me to be patient, to guide their learning step by step, and to encourage them to help each other through group work and discussions. I want my students to feel that the classroom is a safe and supportive place where learning is shared and everyone has a role.
