THE K TO 12 GRADING SYSTEM

SPARK YOUR INTEREST

Episode 3 provides an opportunity to observe how differences in gender, racial, cultural and religious backgrounds, including coming from indigenous people, influenced learner behavior interaction and performance in school. One will also analyze and reflect on practices that teachers use in leveraging diversity in the classroom. It also provides an opportunity to observe how differences in abilities. Affect interaction in his school and learn about the strategies that teachers use in addressing the learners needs toward effective teaching and learning.

TARGET YOUR INTENDED LEARNING OUTCOME

At the end of this Episode, I must be able to:

- ☐ Describe the characteristics and needs of learners from the diverse backgrounds;
- ☐ Identify the needs of students with different levels of abilities in the classroom;
- ☐ Identify the best practices in differentiated teaching to suit the varying learner needs in a diverse class (PPST 3.1.1); and
- ☐ Demonstrate openness, understanding and acceptance of the learners' diverse needs and backgrounds.

REVISIT THE LEARNING ESSENTIALS

Here are principles and concepts relevant to this episode:

1. Principles of development
 - a. Development and learning proceed at varying rates from child to child as well as at uneven rates across different areas of the child's functioning. (NAEYC, 2019)
 - b. Development and learning are maximized when learners are challenged to achieve at a level just above their current level of mastery. And also, when they have many opportunities to practice newly acquired skills. Differentiated instruction is a student-centered approach that aims to match the learning, content, activities and assessment to the different characteristics, abilities, interest, and needs of the learners.

FIELD STUDY

ON BECOMING A TEACHER

**Episode 3 Focus on Gender, Needs, Strengths, Interests, Experiences
Language, Race, Culture, Religion, Socio-economic Status, Difficult
Circumstances, and Indigenous People**

THE K TO 12 GRADING SYSTEM

2. The PPST highlighted the following factors that bring about the diversity of learners:
 - a. Differences in learners gender, needs, strengths, interests, and experiences.
 - b. English linguistic, cultural, socio-economic and religious backgrounds
 - c. Learners with disabilities, giftedness, and talents.
 - d. Learners under challenging circumstances, circumstances which include geographic isolation, chronic illness, displacement due to armed conflict, urban resettlement or disasters, child abuse, and child labor.

Effective teachers are knowledgeable about how issues related to the factors mentioned affect learners. The teachers developed in them **sensitivity** and **empathy**. They remember that the learners respond and perform at different levels. The teachers are sure the students that their **gender identity, culture and religion are respected their strengths are recognized** and their **needs will be met**. These teachers declare to all that **everyone has the chance to learn and succeed**. They create a learning community where everyone can work together and contribute regardless of their abilities, capacities, and circumstances.

Teachers who **celebrate** and **leverage student diversity** in the classroom:

- Use strategies to build a caring community in the classroom.
- Model, respect and acceptance of different cultures and religions
- Bring each of the student's home culture and language into the shared culture of the school.
- Provide more opportunities for cooperation than competition.

3. Focus on **indigenous peoples**

A young teacher approach to indigenous peoples starts with a keen awareness of one's own identity, including one's beliefs and cultural practices. True serious reflection. One may realize that the self is a product of all the influences of key people in one's life and the community, real and virtual. Similarly, learners from indigenous groups carried with them their beliefs, views and cultural practices. One's attitude needs to be that of openness and respect. Come in **not** with the view that one's own culture is superior. We approach with a sincere willingness. And deep interest to know and understand the indigenous people's culture. We aim to make teaching learning **facilitative rather than imposing**.

FIELD STUDY

ON BECOMING A TEACHER

**Episode 3 Focus on Gender, Needs, Strengths, Interests, Experiences
Language, Race, Culture, Religion, Socio-economic Status, Difficult
Circumstances, and Indigenous People**

THE K TO 12 GRADING SYSTEM

- a. From your professional education subjects/courses, most likely you have discussed indigenous peoples in the Philippines. You learn that our country has about **110 ethno-linguistic groups**, majority of which is in Mindanao, some in Northern Luzon and fewer in the Visayas. (UNDP Philippines, 2010). They represent about 10 to 20% of our total population. There are two big indigenous peoples groups which have several smaller ethnic groups within them, the non-muslim groups called the Lumads in Mindanao, and the Igorots Northern Luzon. Among others, we have the Badjaos, Ati and Tumandok, Mangyans, and Aetas.
- b. Republic Act 8371 (1997), the indigenous Peoples Rights Act, recognizes and protects the rights of indigenous cultural communities (ICC) and Indigenous peoples (IP). Our country was admired by other nations for enacting this law. However, years later so, much still has to be done to improve the lives of millions of people from indigenous groups. (Reyes, Mina and Asis, 2017)
- c. Guided by RA 8371, in 2015 DepEd issued DO 32, s.2015, adapting the Indigenous Peoples Education (IPED) Curriculum framework. Most useful for you as a future teacher to remember are the 5 Key Elements of the Indigenous Peoples Education Curriculum (DO 32, s.2015 enclosure, pp.15-18):

1. Curriculum Design, Competencies and Content. Interfacing the national curriculum with Indigenous Knowledge Systems and Practices (IKSPs) and Indigenous Learning Systems (ILS). The design of a culturally appropriate and responsive curriculum has the following features:

- a. Anchors the learning context on the ancestral domain, the community's world view, and its indigenous cultural institutions.
- b. Includes and respects the community's expression of spirituality as part of the curriculum context.
- c. Affirms and strengthens indigenous culturally identity.
- d. Revitalizes, regenerates, strengthens and enriches IKSPs, ILS, and indigenous languages.
- e. Emphasizes competencies that I needed to support the development and protection of the ancestral domain, the vitality of their culture and advancement of indigenous peoples rights and welfare.

OBSERVE, ANALYZE, REFLECT

Activity 3.1

Observing differences among learners, gender, needs, strengths, interests and experiences; and differences among learners' linguistic, cultural, socio-economic, religious backgrounds, and difficult circumstances.

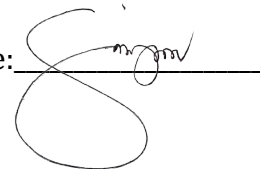

Name of FS Student: Jay John C. Yasis

Date: 9/14/2025

Course: BSED Major in Sciences

Year and Section: 4th Year Block A

Resource Teacher 1: Sir Kim Paolo Armin A. Torcelino VI

Signature: 

The learner's differences and the type of interaction they bring surely affect the quality of teaching and learning. This activity is about observing and gathering data to find out how its student diversity affects learning.

To realize the **Intended Learning Outcomes**, where you're always through these steps:

Step 1. Observed a class in different parts of his school day. (beginning of the day, class time, recess, etc.)

Step 2. Describe the characteristics of the learners in terms of age, gender, and social and cultural diversity.

Step 3. Describe the interaction that transpired inside and outside the classroom.

Step 4. Interview the resource teacher about the principles and practices that she uses in dealing with diversity in the classroom.

Step 5. Analyze the impact of individual differences on learners' interactions.

The **observation form** is provided for me to document my observations.

OBSERVE

An Observation Guide for the Learners' Characteristics

Read the following carefully before you begin to observe. Then write your observation report on the space provided on the next page.

Find out the number of students gathered as to their ages, gender, racial groups, religious and ethnic backgrounds.

During class:

How much interaction is there in the classroom? Describe how the students interact with one another and with a teacher. Are there groups that interact more with the teacher than others?

Observe the learner seated at the back and the front part of the room. Do they behave and interact differently?

Describe the relationship among the learners. Do the learners cooperate with or compete against each other?

Who are mostly students participating actively? Who among them asks for the most help?

When a student is called and cannot answer the teacher's question, do the classmates try to help him? or do they raise their hands so that the teacher will call them instead?

Outside class:

How do the students grow themselves outside class? Homogeneously by age? by gender? by racial or ethnic groups? by their interests? or by the students in mixed social groupings? If so, describe the groupings.

Notice who are alone and those who are not interacting. Describe their behavior.

Interview the teachers and ask about their experience about learners in different circumstances. Request them to describe these circumstances and how it has affected the learners. Ask about the strategies they used to help these learners cope.

Language and cultural differences.

Differences in religion

Socio-economic status.

OBSERVATION REPORT

Name of School Observed: Abaño Laboratory School
School Address: J.Lukban Ext.Daet, Camarines Norte
Date of Visit: September 9, 2025

There are 26 Grade 10 students at Abaño Laboratory School. Almost all of them are 15 years old, except for Ms. Remoroza and Ms. Labarra, who are both 16. The class is composed of 17 females and 9 males. Majority of the students are Roman Catholic, except for Ms. Ingatan, who is Christian, Ms. Acerado which is Born again Christian and Mr. Mira and Mr. Mago, which are both members of the Iglesia ni Cristo (INC). As far as I know, all of them are Filipinos.

During class, the interaction is like a typical school atmosphere, quiet, focused, and the learners are attentive to the teacher. However, every now and then, a student would crack a joke that made the whole class laugh, lightening the mood and creating a balance between seriousness and comfort. Those who interacted most with the teacher were usually the students seated in front. They seemed more confident in asking and answering questions. Meanwhile, the students at the back were generally more quiet. Although they also interacted, they tended to be shy compared to those in front. There was a noticeable difference in behavior between learners at the front and those at the back. The front-row students spoke more confidently with their seatmates, while the students at the back often whispered their conversations, as if avoiding being noticed by the teacher. Still, both groups interacted with their peers regularly. The difference was mainly in their level of confidence.

Circumstances, and Indigenous People**

THE K TO 12 GRADING SYSTEM

In terms of relationships, the class showed a healthy and supportive kind of competition. I did not sense any negative rivalry. Instead, they helped each other learn. For example, when Sir Kim, their adviser, asked the class to solve a problem on projectile motion, almost everyone excitedly shout their answers. The correct solution, however, came from a learner at the back. The students in front were surprised and immediately asked her how she did it. She then explained all the steps, showing not only her skill but also her willingness to share knowledge, a good example of selflessness in learning. As expected, the learners in front were more active participants, while those at the back were the ones more likely to ask their seatmates for help. When a student was called and gave the wrong answer, some classmates would quickly raise their hands to respond. But there were also moments when no one raised a hand because they were unsure of the answer. During these times, Sir Kim would call on some high achiever students, encouraging them to try or at least make a guess, which kept the class engaged. Outside the classroom, students naturally grouped themselves according to their common interests, whether in hobbies, games, movies, or even the actors they admired. These shared likes became the foundation of their friendships. From what I observed, no learner was left out or isolated. Everyone had someone to talk to, whether in the lively groups at the front or the quieter but equally fun groups at the back. In our interview, Sir Kim explained that he uses differentiated instruction to address the diverse needs of his learners. He adjusts his teaching strategies depending on the students' level of thinking. For example, when tackling complex topics like Physics problems, he gives simpler, guided exercises to those who need more support while challenging the advanced learners with more difficult tasks. He also shares simulation websites to help every learner visualize the problem and the lesson. This way, each student learns at their own pace and according to their capacity, making sure no one is left behind.

Overall, the Grade 10 students I observed showed a balance of cooperation, respect, and active participation, guided by a teacher who values inclusivity and adapts his teaching to meet the needs of all learners.

THE K TO 12 GRADING SYSTEM

ANALYZE

- 1) Identify the persons who play key roles in their relationships and interactions in the classrooms. What roles do they play? Is there somebody who appears to be the leader, a mascot/joker, an attention seeker, a little teacher, a doubter/pessimist?

Most of the time, the students in front of the class are the ones confident enough to communicate with the teacher and crack jokes that connect with those around them. Sometimes, though, the jokes get so loud that even the students at the back join in or add their own comments. These simple acts often uplift the classroom atmosphere, shifting the serious mood into a lighter and happier one.

Compared to the front, the students at the back tend to be quieter, usually whispering their conversations to each other. From this, I noticed that the students in front are somewhat like the sailors steering the atmosphere of the classroom.

What makes the learners assume these roles? What factors affect their behavior?

Most of the students in front of the class seems that they are the high achievers and awardees of academic excellence. Because of this, they tend to be more confident when engaging in conversations with their teachers.

- 2) Is there anyone you observe who appear left out? Are you students who appear “different”? Why do they appear different? Are they accepted or rejected by the others? How is this shown?

As I observed, none of the students seemed left out, the only difference I guess is from the students' confidence. But, everyone had someone to talk to inside the classroom, but from the confident students in front who created a lively and loud atmosphere, compare to the students at the back whose vibe was a bit quieter, even slightly gloomy, but still happy in their own way. Each student had a group of friends, some big and some small. Despite the differences in social groups, everyone seemed to have a companion, and I think it's amazing to see a class like this.

What does the teacher do to address issues like this?

Management

FIELD STUDY

ON BECOMING A TEACHER

**Episode 3 Focus on Gender, Needs, Strengths, Interests, Experiences
Language, Race, Culture, Religion, Socio-economic Status, Difficult
Circumstances, and Indigenous People**

THE K TO 12 GRADING SYSTEM

Sir Kim makes sure no one is left out by using differentiated instruction. He teaches based on the level of each student's thinking, so those who are fast learners sometimes get more challenging tasks, while those who need more guidance are given simpler steps to follow. This way, everyone can participate in their own way, and no one feels ignored.

3) How do you spell the teacher influenced the class interaction, considering the individual differences of the students?

The teacher influenced the class interaction in a positive way. Because Sir Kim adjusts his teaching, the students are not scared to try even if they might be wrong. He also encourages guesses when no one knows the answer, which makes the class feel safer and less pressured. This kind of approach I think helps the students interact more and support one another despite their differences.

4) What strategies does the teacher use to maximize the benefits of diversity in the classroom? How does the teacher leverage diversity?

Sir Kim's main strategy is differentiated learning. He uses the students' different levels and strengths to bring out the best in them. For example, when advanced learners solve harder problems, they sometimes explain the steps to others, which makes the whole class learn together. He also mixes students in activities so that different talents and perspectives are shared. Instead of seeing diversity as a problem, he turns it into a way for students to help one another.

REFLECT

1) How do you feel being in that classroom? Did you feel a sense of oneness or unity among the learners and between the teacher and the learner?

I honestly felt a sense of unity in the class. Even if students were different in how active or shy they were, they still respected each other and had fun together. The teacher also played a big role in making the environment welcoming by treating every student fairly. Being in that classroom gave me the feeling that diversity is not a division but a strength, and both the teacher and students worked together as one.

An Observation Guide for the Learners' Characteristics

Read the following carefully before you begin to observe. Then write your observation report on the space provided on the next page.

1. Observe the class to see the differences in abilities of the learners.
2. Try to identify the students who seem to be performing well and those that seem to be behind.
3. Validate your observations by asking the teacher about the background and needs of the learners.
4. Observe the behavior of both regular students and those with special needs. Note their dispositions, pace in accomplishing tasks, interaction with teacher, and interaction with others.
5. Observe the teacher's method in addressing the individual learning needs of the students in his or her class.

OBSERVATION REPORT

Name of the School Observed: **Abaño Laboratory School**

School Address: **J. Lukban Ext., Daet, Camarines Norte**

Date of Visit: **September 9, 2025**

All of the students in the class I observed have special needs, specifically they are Deaf and Mute learners. Despite their condition, the class environment felt very lively and engaging.

I noticed that the students seated on the right side of the classroom, especially the boys, were very active in participating. Even if they sometimes got the answers wrong, they were not afraid to try and learn, which showed their eagerness. Meanwhile, the students seated at the back seemed to be more behind, particularly one student who did not only have hearing and speech impairment but also showed some characteristics of autism. Because the students have different needs and abilities, their teacher, Ma'am Visaya, explained that she uses differentiated instruction to adjust her lessons according to the

Circumstances, and Indigenous People**

THE K TO 12 GRADING SYSTEM

learners' levels of understanding. Her goal is to make sure that, despite their differences, the students can still achieve the same learning objectives together.

Even though this was a SPED class, it honestly felt just like a typical classroom. The students were curious, energetic, and expressive. They used sign language to communicate, but this did not stop them from being highly interactive with one another. In terms of learning pace, however, it was clear that some students were ahead of the others, especially in their cognitive awareness, listening, and writing skills. Another important thing I observed was how Ma'am Visaya made use of IEPs (Individualized Education Programs) to identify and respond to the unique needs of her students, especially those in the spectrum. One moment stood out to me: when one learner, who seemed to be irritated by our presence during the observation, began showing signs of discomfort, Ma'am Visaya immediately went beside her. She gently tapped her shoulder to calm her, and even tied her hair to make her feel more comfortable. That small but thoughtful action showed how much care and attention she gives to her students.

Overall, the class was a good example of how individual differences can be addressed through patience, care, and proper strategies. The students may have special needs, but they showed the same energy, curiosity, and desire to learn as any other class. With a teacher like Ma'am Visaya who understands their needs and supports them individually, the learners are given not just education, but also genuine care.

ANALYZE

1) Did your observation match the information given by the teacher?

Yes, because before our observation started, Teacher Visaya told us that it was a remedial class. This matched the flow of the lesson, which was slower and delivered with more patience than usual. As expected, many of the students struggled to grasp the lesson, and the teacher kept reminding them to study hard at home. Even though it was a remedial class, I was really impressed by the dedication of the students. They often made mistakes, but instead of giving up, they would sit, think, and try again. That was amazing to see, and I think that's what learning should be, the teacher patiently encouraging students to keep trying, reminding them that even if they're wrong, they are always welcome to try again.

Circumstances, and Indigenous People**

THE K TO 12 GRADING SYSTEM

-
- 2) Describe the differences in ability levels of the students in the class? What practices or strategies are done or should be done to differentiate instruction to meet the needs of the learners?

Almost all of the students seemed to have the same level of ability in the class, except for one learner at the back. As I observed her, she looked and behaved differently compared to her classmates. While most of her peers were either actively participating in the lesson or busy copying notes, she appeared irritated and kept glancing outside the classroom, maybe just not used to having many people observing them. She seemed to have different needs from the rest of the learners. The teacher addressed this by allowing her some space to do her own thing. At one point, Ms. Visaya even walked over, gently patted her shoulder, and tied her hair to help calm her down, noticing that the learner was feeling uneasy and not at peace. I really appreciated how Ms. Visaya responded, it felt to me like the best way a teacher could handle that situation. If I were in her position, I believe I would have done the same.

- 3) Describe the methods used by the teacher in handling the students' differences in abilities. How did the students respond to the teacher? Did the teacher use differentiated instruction? If yes, describe how.

The teacher, Ma'am Visaya, really showed patience and care in handling the students' different abilities. According to her, she uses differentiated instruction, which means she adjusted the lesson depending on each student's level of understanding. For example, those students who were ahead were given more challenging tasks, while those who needed help received step-by-step guidance. She also used IEPs (Individualized Education Programs) to address specific needs, especially for students in the spectrum. The students responded positively to her. Most of them were active, and even those who were struggling still tried because they knew their teacher supported them.

REFLECT

- 1) Recall the time when you were in elementary or high school. Recall the high and low achievers in your class. How did your teacher deal with differences in abilities? Was your teacher effective?

When I was in Grade 9, my math teacher, Ma'am Taller, used a strategy that made me appreciate the subject even though I didn't really enjoy solving math problems back then. Her approach was to present all the possible scenarios connected to a topic. She would show us

Circumstances, and Indigenous People**

THE K TO 12 GRADING SYSTEM

every angle a problem could take and provide repetitive examples so we could become familiar with them and eventually recognize patterns in solving different situations.

Sometimes, my high-achiever classmates would understand after just a few examples, but Ma'am Taller never stopped until even the slower learners had no more questions about the lesson. For me, this strategy was very effective because it united our class and created a light, happy atmosphere. We felt that no one was being left behind, and it made us actually look forward to her lessons.

2) What dispositions and traits will you need as a future teacher to meet the needs of the learners?

As a future teacher, I think I will need to be patient, understanding, and observant. Patience is important because not all learners move at the same pace, not all of them will pick up the lesson at the same time. Being understanding helps me accept their differences as well as see their strengths beyond their struggles. I also need to be observant so I can notice small changes in my students' behavior, like when a student feels uncomfortable and respond right away, just like how Ma'am Visaya comforted her learner. Most of all, I believe I should always show genuine care, because when learners feel supported, they are more willing to try and learn.

SHOW YOUR LEARNING ARTIFACTS

With the principle of individual differences in mind, what methods and strategies will you remember in the future to ensure that you will be able to meet the needs of both the high and low achievers in your class? Make a collection of strategies on how to address students' different ability levels.

In the future, I will remember to use differentiated instruction by adjusting tasks depending on the learner's level, and just like ma'am Visaya, I will also apply Individualized Education Programs (IEPs) for students with special needs or those who require closer support. I plan to use flexible grouping, where students with different strengths are mixed so they can help and learn from one another, and I will give guidance to give step-by-step support until the learner becomes more independent. I also want to encourage peer support on my students by letting advanced learners explain to their classmates like sir Kim in his class, which can build cooperation and confidence. Lastly, I will make sure to give positive reinforcement by appreciating not only correct answers but also the effort students put into their work, so that both high and low achievers feel included and valued in my class.

Evaluate Your Work Task Field Study 1, Episode 3-**Focus on Gender, Needs, Strengths, Interests, Experiences
Language, Race, Culture, Religion, Socio-economic Status, Difficult Circumstances, and Indigenous Peoples**

Learning Outcomes: describe the characteristics and needs of learners from diverse backgrounds; Identify the needs of students with different levels of abilities in the classroom; Identify best practices in differentiated teaching to suit the varying learner needs in a diverse class (PPST 3.1.1); demonstrate openness, understanding and acceptance of the learners diverse needs and backgrounds.

Name of FS Student: Jay John C. Yasis Date Submitted: September 14, 2025
Year and Section: 4th Year Block A Course: BSED Major in Sciences

LEARNING EPISODES	EXCELLENT 4	VERY SATISFACTORY 3	SATISFACTORY 2	NEEDS IMPROVEMENT 1
ACCOMPLISHED OBSERVATION SHEET	All observation questions/tasks completely answered/ accomplished.	One (1) or two (2) observation questions/tasks not answered/ accomplished	Three (3) observation questions/tasks not answered/ accomplished	Four (4) or more observation questions/ tasks not answered/ accomplished.
ANALYSIS	All questions were answered completely; answers are in depth and are thoroughly grounded on theories; grammar and spelling are free from error.	All questions were answered completely; answers are clearly connected to theories; grammar and spelling are free from errors.	Questions were not answered completely; answers are not clearly connected to theories; one (1) to three (3) grammatical spelling errors.	Four (4) or more observation were not answered; answers not connected to theories; more than four (4) grammatical/spelling errors.
REFLECTIONS	Profound and clear; supported by what were observed and analyzed	Clear but lacks depth; supported by what were observed and analyzed	Not so clear and shallow; somewhat supported by what were observed and analyzed	Unclear and shallow; rarely supported by what were observed and analyzed
