OBSERVATIONS OF LEARNING-TEACHING IN ACTUAL SCHOOL ENVIRONMENT

Episode 5 Creating an Appropriate Learning Environment

THE K TO 12 GRADING SYSTEM

SPARK YOUR INTEREST

This learning Episode provides an opportunity to examine how classrooms are structured or designed to allow everyone's maximum participation for effective learning. You should be able to examine how classroom management practices affect learning. This Episode enhances the application of the theorist learned in the following professional subjects, such as Facilitating Learner-Centered Teaching and The Child and Adolescent Learners and Learning Principles.

TARGET YOUR INTENDED LEARNING OUTCOME

At the end of this Episode, I must be able to:

- ☐ Plan on how to manage time, space, and resources; and
- ☐ Provide a learning environment appropriate to the learners and conducive to learning.

REVISIT THE LEARNING ESSENTIALS

The classroom climate that is conducive for learning is one that is non-threatening, yet business-like. It is a classroom where, when creating audio-visual presentations, the following are observed:

- Specific classroom rules and procedures are clear.
- Classroom rules and procedures are discussed within the first few days of the school.
- Students are involved in the design of rules and procedures.
- Techniques to acknowledge and enforce acceptable behavior are employed.
- Clear limits for unacceptable behavior are established, and negative consequences for such are communicated.
- Classroom processes are democratic.

OBSERVE, ANALYZE, REFLECT

Activity 5.1

Managing Time, Space, and Learning Resources

Name of FS Student: Jay John C. Yasis

Course: BSED - Sciences

Year and Section: 4th Year – Block A

Resource Teacher 1: Sir Kim Paolo Armin A.
Torcelino VI

Signature: _____

Date: 9/9/25

OBSERVE

Observe and use the observation sheet provided for you to document your observations. Use the activity form provided for you to document your observations.

- 1) As you observe, the class look into the characteristics of the learners. Note their ages.
- 2) How many boys are there and how many girls?
- 3) Focus on their behavior. Are they already able to manage their own behavior?
- 4) Can the learners already work independently?
- 5) Describe there is span of attention.

Episode 5 Creating an Appropriate Learning Environment

THE K TO 12 GRADING SYSTEM

ANALYZE

Analyze and answer these questions on observe pleasure management practices. It is also good to ask the teacher for additional information, so you can validate your observation. Write your notes below and then organize your data in the Table that follows.

- 1) Are there areas in the classroom for specific purposes (Storage for teaching aids books, students, belongings, supplies, etc.)? Describe these areas. Will it make a difference if these areas for specific purposes are not present?

I observed that to make or to help in maintaining a clean classroom especially the floor, the students remove their shoes and have clean slippers ready to wear inside the classroom. Thus, the classroom has designated area for storing students' shoes to prevent any dirt like mud, soil, dust and any other debris that their shoes may brought after they go outside. Their shoe area is located just at the entrance infront of the classroom, it is sturdy though it must be cleaned every after class because of all the dirt accumulated. If this area is not present, it will have a huge impact on the classroom, because its main purpose is to keep the classroom clean so if the classroom will not have this system and area, many dirt will be scattered across the classroom floor.

- 2) Are there rules and procedures posted in the room? List them down. Do these rules reinforce positive behavior?

Yes, there are rules and procedures posted in the room. The classroom rules are:

1. Avoid being late
2. Avoid swearing
3. Wear complete uniform
4. Attend the flag ceremony
5. Seat properly
6. Listen attentively
7. Participate actively
8. Work quietly to not disturb others
9. Keep your things
10. Maintain cleanliness
11. Do not skip as cleaners
12. Be cooperative
13. Be responsible
14. Be respectful
15. Be honest

ID 9108653506

OBSERVATIONS OF LEARNING-TEACHING IN ACTUAL SCHOOL ENVIRONMENT

Episode 5 Creating an Appropriate Learning Environment

THE K TO 12 GRADING SYSTEM

16. Be kind and enjoy learning

17. Lastly, follow the rules properly

These rules reinforce positive behavior because they promote respect, responsibility, cooperation, honesty, and kindness, which are essential for creating a safe and supportive learning environment. They also encourage discipline (such as punctuality, cleanliness, and proper seating), which helps students develop good habits not only in the classroom but also in real-life situations.

3) Did this students participate in making the classroom rules? If there is Resource Teacher is available, ask him or her to describe the process. What's the effect of students participation in rule-making on students behavior.

I am not fully sure if the students participated in making the classroom rules. However, if they does involved in creating them, the benefit would be that they are more likely to take ownership and follow the rules willingly. And also, when students participate in rule-making, they feel that their voices are valued and that the classroom is a shared space where their input matters. This leads to better self-discipline, respect for others, and a stronger sense of responsibility, since they helped set the classroom rules they are expected to follow it.

4) What are the daily routines done by the Resource Teacher? (Prayer attendance assignment of monitors, warm up activities and cetera.)How are they done?

Before the lesson starts, the teacher first asks someone in the class to start the prayer, after that the teacher calls out each student to check for the attendance. After these preliminaries, he will collect the assignments if there was, and he then recaps on the previous lesson by asking the students if they remember the last lesson. After the review of the previous lesson, he starts the new lesson and discussion with some recitations mixed in. He then gives an activity to the class that is related to the lesson and monitors them while they accomplish their activity. After this, he collects the activity and gives them their assignment if there are any, and then ends the class by thanking the everyone especially the students who actively participate in the class.

5) Is there a seating arrangement? What is the basis of this arrangement? Does this help in managing the class?

There are no formal seating arrangement in the grade 10 class. I think they sit by their friend groups, but I didn't notice any problem on that, and every students seems to be happy as well. they have has four tables combined to form two rows smartly placed at the center of the room so that each student don't have difficulties when listening and facing the teacher at front. The students sat on monoblucks chairs, though it is made of plastic, they are very sturdy. Each students have enough space on their table to do their school works.

FIELD STUDY

OBSERVATIONS OF LEARNING-TEACHING IN ACTUAL SCHOOL ENVIRONMENT

Episode 5 Creating an Appropriate Learning Environment

THE K TO 12 GRADING SYSTEM

6) Observe the noise level in the classroom. How is this manage?

The level of noise inside the classroom is surprissingly low, because compare to when I was in high school, our class was like in chaos everyday where talking to seatmate was heard across the classroom specially the students at the back that has their own businesses. But this grade 10 class was different in the sense that they are focused on their task given by their teacher and they whisper when they talk to their seatmates. Thus, they are not being noisy as a typical grade 10 class.

7) If a learner is not following instruction or is off task, what does the resource teacher do? Describe the behavior? Is strategies used?

The resource teacher monitors the students, and when he notices someone struggling, he approaches and asks if that student needs help. If they do, he promptly and kindly guides them and continues to monitor their progress. Sometimes, their seatmates also help them with the activity, which is something I observed. Some students quietly ask their seatmates about the task so as not to disrupt others, and they work on the activity together step by step.

8) What does the resource teacher do to reinforce positive behaviors? Behavior strategies.

The resource teacher reinforces positive behaviors by always acknowledging the efforts of the students. For example, when students participate in the discussion or answer during recitation, he thanks them and shows appreciation, which makes them feel valued. He also walks around the room to monitor, and when he notices someone struggling, he doesn't scold but instead approaches kindly and offers help. This strategy shows the students that mistakes are part of learning and that they can always ask for guidance.

THE K TO 12 GRADING SYSTEM

REFLECT

Reflection as a future teacher.

1. Why do you need to enforce positive discipline?

I need to enforce positive discipline because it helps build not just order in the classroom but also respect and trust between me and my students. For me, discipline should not only be about correcting mistakes but guiding students to choose what is right on their own. When rules are clear and fair, students learn responsibility and respect without feeling scared or forced.

I will use every experience and advice that my previous teachers and my current resource teacher have shared with me. For example, I remember how one of my teachers would always remind us to listen attentively and encourage us by saying, “I know you can do this.” That small act of positive reinforcement motivated us more than any punishment would. In the same way, I want to apply that in my future classroom, whether it is by praising students for being honest, recognizing their effort to cooperate, or encouraging them when they participate actively.

By enforcing positive discipline, I am not only making the classroom environment conducive for learning but also leaving my students with values they can carry even outside of school, like respect, responsibility, and kindness. In the end, I want my classroom to be a place where students don't just learn lessons in science but also lessons in life.

Date: 9/9/25

OBSERVE

CLASSROOM MANAGEMENT MATRIX

Observe a class and accomplish the given matrix.

Aspects of Classroom Management	Description	Effect on the Learners (to be filled out after you answer the analysis questions)
1) Specific Areas in the Classroom	There is a somewhat a water drinking area, this area is located at the rightside of the classroom and although that is kinda tight space, it haouses a water despencer where the students can freely fetch water whenever they feel thirsty.	The water dispenser makes the students feel more comfortable and at ease because they can drink anytime they feel thirsty. It lessens distractions and helps them focus better on the lesson since their basic needs are taken care of.
2) Classroom Rules	The slassroom rules are simple and easy to understand, they are straight forward and it is posted inside the classroom. It	The presence clear and posted rules on the classroom make the students more disciplined and aware of their responsibilities. They know

THE K TO 12 GRADING SYSTEM

	composes of rules such as, avoid being late, avoid swearing, wear complete uniform, attend the flag ceremony, seat properly and many more, there are total of 17 classroom rules.	what is expected of them, so they behave properly, show respect, and follow routines without too much reminder from the teacher.
3) Classroom Procedures	The class procedures are clear and easy to follow, because the teacher explains the daily tasks in simple terms. The routine usually starts with a prayer, followed by attendance checking, collection of assignments if there are any, a short review of the previous lesson, then the discussion, an activity, and submission. Then, the giving of assignments when needed.	Because the procedures are easy to follow, the students become more organized and know exactly what to do step by step. This helps them adjust smoothly and participate in class activities without confusion, making the learning process more efficient.
4) Daily Routines	The class routines are similar to procedures they are simple, easy to follow, and help engage learners while reinforcing what they have previously learned. As part of their daily routine, students begin the day with a prayer before the first class starts, and the assigned cleaners also take time to clean the classroom before lessons begin.	The daily routines like praying and cleaning help the students start the day with focus and discipline. It also teaches them responsibility and teamwork, since they share the tasks together, creating a more orderly learning environment.
5) Seating Arrangement	There are no formal seating arrangement in the grade 10 class, they have has four tables combined to form two rows smartly placed at the center of the room so that each student don't have difficulties when listening and facing the teacher at front. The students sat on monoblucks chairs, though it is	The seating arrangement allows students to clearly see and hear the teacher, making it easier to pay attention during discussions. Since they also have enough space on their tables, they are more comfortable and able to work without being distracted.

	made of plastic, they are very sturdy. Each students have enough space on their table to do their school works.	
6) Handling misbehaviour/off task behavior	In this class of grade 10, I only witnessed few misbehavior in and when this occurs, such as students talking with their seatmates during discussions, the teacher quickly reminds them to stay quiet and focus on the lesson. He does this without scolding, but rather in a polite and gentle tone. Sometimes even adding humor to make the students laugh and ease the atmosphere in the classroom.	The gentle way of handling misbehavior makes the students feel respected and not embarrassed. They become more willing to listen and correct their actions. Adding humor also keeps the atmosphere light, so students stay engaged and motivated to learn.
7) Reinforcement of Positive Behavior	The resource teacher reinforces positive behavior by acknowledging the students' efforts, thanking them when they participate in class, and showing appreciation to make them feel valued. He also kindly approaches and helps those who are struggling, reminding them that mistakes are part of learning and that they can always ask for guidance.	Acknowledging and appreciating the students' efforts makes them feel valued and motivated to participate more. Those who struggle also feel encouraged because they know mistakes are normal and that they can always ask for help.
8) Others		
9) Other		
10) Others		

ANALYZE

1) How did the classroom organization and routines affect the learners' behavior?

Management
System
ISO 9001:2015
www.tuv.com
ID 9108653506

FS1

FIELD STUDY

OBSERVATIONS OF LEARNING-TEACHING IN ACTUAL SCHOOL ENVIRONMENT

Episode 5 Creating an Appropriate Learning Environment

THE K TO 12 GRADING SYSTEM

Classroom organization and routines gave the learners a sense of order and direction, helping them know what to expect and what was expected of them. Because of this, they became more focused, behaved better, and showed responsibility. For example, when students know that they need to submit their assignments before the lesson starts, they come to class more prepared. It also reduced confusion and distractions, making the class run more smoothly and productively.

2) What should the teacher have in mind when she/he designs the classroom organization and routines? What theories and principles should you have in mind? The teacher should always consider the learners' needs and abilities when designing routines so everyone can follow and benefit. For example, younger children may need more visual reminders, like charts or signals, to guide their behavior. It also helps to apply behaviorist principles, such as giving praise when students follow routines, and constructivist ideas, like letting them take part in creating class rules. By keeping the routines clear and consistent, the teacher helps students feel secure and motivated to learn.

3) Which behavior strategies were effective in managing the behavior of the learners? In motivating students? Why were they effective? One effective strategy was using positive reinforcement, such as giving praise, rewards, or even simple recognition when students behaved well or participated. For example, when a teacher acknowledged a student who answered confidently, it encouraged others to try as well. This motivated learners because they felt appreciated and more confident in their abilities. Positive reinforcement worked well since it focused on strengthening good behavior rather than punishing mistakes.

REFLECT

Reflect on the following and write your insights.

- 1) Imagine yourself organizing your classroom in the future. In what grade year level do you see yourself? What routines and procedures would you consider for this level, why?

Management
System
ISO 9001:2015
www.tuv.com
ID 9108653506

FS1

FIELD STUDY

OBSERVATIONS OF LEARNING-TEACHING IN ACTUAL SCHOOL ENVIRONMENT

Episode 5 Creating an Appropriate Learning Environment

THE K TO 12 GRADING SYSTEM

I think if I assess myself at this moment, it would be perfect for my personality and approach of teaching if I am going to handle grade 7 or grade 8. For this grade level, the routines and procedures I would consider are not just those typical or traditional routines like, praying, cleaning and arranging the chairs and table before the start of the class but I will also include an energizer and a motivational activity to make my future students engage not just physically but mentally and socially as well. It will help to make them feel that learning, not just science in particular, is not boring and dull, but rather it is my way to welcome them with a warm and cheerful atmosphere to lighten their moods as we go along to learn and discover in the world science together.

2) Make a list of the rules you are likely to implement in this level. Why would you choose these rules?

My future classroom rules are:

1. The classroom cleaners must clean and prepare the classroom before the lesson starts because it is more pleasing to learn when the classroom environment is clean.
2. Respect everyone's differences, whether it is cultural background, religion, especially even economic status.
3. Listen attentively when someone is speaking because it shows respect and ensures everyone is heard.
4. Use kind and respectful words because positive communication builds good relationships in class.
5. Take care of classroom materials and facilities because being responsible helps preserve resources for everyone's use.

In my future classroom, the goal of my rules are to provide a learning environment where students feel safe, respected, and responsible.

3) Should learners be involved in making the class rules? Why?

Yes, student must be involved in making the class rules because it gives them a sense of responsibility for themselves, it will also highlight their idea on how to maintain a peaceful and ideal classroom. Doing this practice also will make the students feel that they are not just a mere students, but also collaborators in ensuring the classroom functions well, which makes them feel a stronger sense of belonging.
