OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 8 Close Encounter with the School Curriculum

SPARK Your Interest

Formal education begins in school. Schools are institutions established to design total learning activities appropriate for each learner in each grade level. Thus, schools have recommended curriculum which is the enhanced K to 12 curriculum. The recommended curriculum was translated into written curriculum like books, modules, teachers' guides, and lesson plans which are the basis of the taught curriculum. A teacher who implements the curricula needs support materials (support curriculum) to enhance teaching and learning so that the written and the taught curricula can be assessed (assessed curriculum) to determine if learning took place (learned curriculum). However, there are so many activities that happen in schools but are not deliberately planned. This refers to the hidden curriculum.

A classroom teacher plans, implements, and evaluates school learning activities by preparing a miniscule curriculum called a lesson plan or a learning plan. The teacher then puts life to a lesson plan by using it as a guide in the teaching-learning process where different strategies can be used to achieve the learning objectives or outcomes. There are many styles of writing a lesson plan, but the necessary parts or elements such as (a) Learning Outcomes (b) Subject Matter (c) Teaching -Learning Strategies, and (d) Evaluation or Assessment should always be included.

All of these elements should be aligned so that at the end of the teaching-learning episode, learning will be achieved with the classroom teacher as a guide.

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 8 Close Encounter with the School Curriculum

TARGET Your Intended Learning

Outcome

At the end of this Episode, I must be able to:

- identify the different curricula that prevail in the school setting;
- describe how the teacher manages the school curriculum by planning, implementing lessons through different strategies and assessment of learning outcomes; and
- analyze if the teacher aligns the objectives to subject matter, to teaching strategies and assessment.

REVISIT the Learning Essentials

School Curriculum: What is this about?

From a broad perspective, curriculum is defined as the total learning process and outcomes as in lifelong learning. However, school curriculum in this course limits such definition of total learning outcomes to confine to a specific learning space called school. Schools are formal institutions of learning where the two major stakeholders are the learners and the teachers.

Basic education in the Philippines is under the Department of Education or DepEd and the recommended curriculum is the K-12 or Enhanced Basic Education Curricula of 2013. All basic education schools offering kindergarten (K) elementary (Grades 1 to 6) and Secondary (Grades 7-10, Junior High School and Grades 11 to 12, Senior High School) adhere to this national curriculum as a guide in the implementation of the formal education for K to 12. What are the salient features of the K to 12 Curriculum? Here are the features. It is a curriculum that:

1. strengthens the early childhood education with the use of the mother tongue.
2. makes the curriculum relevant to the learners. The use of contextualized lessons and addition of issues like disaster preparedness, climate change and information and communication technology (ICT) are included in the curriculum. Thus, in-depth knowledge, skills and values, attitude through continuity and consistency across every level and subject.
3. builds skills in literacy. With the use of Mother Tongue as the main language in studying and learning tools from K to Grade 3, learners will become ready for higher level skills.

FS1

FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 8 Close Encounter with the School Curriculum

4. ensures unified and seamless learning. The curriculum is designed in a spiral progression where the students learn first the basic concepts, while they study the complex ones in the next grade level. The progression of topics matches with the developmental and cognitive skills. This process strengthens mastery and retention.
5. gears up for the future. It is expected that those who finish basic education in Grade 12 will be ready for college or tech voc careers. Their choice of careers will be defined when they go to Grades 11 and 12.
6. nurtures a fully developed youth. Beyond the K to 12 graduate, the learner will be ready to embark on different career paths for a lifetime. You will recall that a school curriculum is of many types for the Kindergarten to Grade 12 in the country.
 - The enhanced curriculum K to 12 curriculum is the Recommended Curriculum. It is to be used nationwide as mandated by Republic Act 10533.
 - When the curriculum writers began to write the content and competency standards of the K to 12 Curriculum it became a Written Curriculum. It reflects the substance of RA 10533 or the Enhanced Basic Education Act of 2013. In the teacher's class, it is the lesson plan. A lesson plan is a minuscule written curriculum in minuscule.
 - What has been written in a lesson plan has to be implemented. It is putting life into the written curriculum, which is referred to as the Taught Curriculum. The guidance of the teacher is very crucial.
 - A curriculum that has been planned, and taught needs materials, objects, gadgets, a laboratory, and many more that will help the teacher implement the curriculum. This is referred to as the **Supported Curriculum**.
 - To find out if the teacher has succeeded in implementing the lesson plan, an assessment shall be made. It can be done in the middle or end of the lesson. The curriculum is now called the **Assessed Curriculum**.
 - The result of the assessment when successful is termed a **Learned Curriculum**. Learned Curriculum whether small or big indicates accomplishment of learning outcomes.

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 8 Close Encounter with the School Curriculum

- However, there are unplanned curricula in schools. These are not written, nor deliberately taught but they influence learning. These include peer influence, the media, the school environment, the culture and tradition, natural calamities, and many more. This curriculum is called **Hidden Curriculum or Implicit Curriculum**.

So what will be the roles and responsibilities of the teacher about the school curriculum, specifically in the K to 12 or the enhanced curriculum for basic education?

Teachers then should be multi-talented professionals who:

- Know and understand the curriculum as enumerated above;
- Write the curriculum to be taught;
- Plan the curriculum to be implemented;
- Initiate the curriculum which is being introduced;
- Innovate the curriculum to make it current and updated;
- implement the curriculum that has been written and planned; and
- Evaluate the written, planned, and learned curriculum.

REFLECT

Activity 8.1

Curricula in the School Setting

Resource Teacher : Sir Kim Paolo Armin A. Torcelino VI Signature:  School: Abaño Laboratory

Grade/Year Level : Grade 10-Naghihimagsik Subject Area : Science Date: 10/07/25

It's time to look around. Discover what curriculum is operating in the school setting. Recall the types of curriculum mentioned earlier. Can you spot where these are found? Let's do a hunting game!

OBSERVE

1. Locate where you can find the following curriculum in the school setting. Secure a copy, make observations of the process and record your information in the matrix below. Describe your observations.

Type of Curriculum	Where Found	Description
1. Recommend Curriculum (K to 12 Guidelines)	Curriculum Guide	These serve as a guide for teachers so their teaching follows the national standards. It also helps keep the quality of education consistent across different schools and regions.
2. Written Curriculum (Teacher's Lesson Plan)	Daily Lesson Plan	Teachers prepare these plans to organize their daily lessons and activities. It serves as their guide throughout the teaching process and helps make sure

		that the learning objectives are achieved.
3. Taught Curriculum (Teaching Learning Process)	Class Discussion	This part shows the actual implementation of lessons during class interactions. By observing this, we can see how teachers adjust their plans depending on the students' needs and situations.
4. Supported Curriculum (Subject Textbook)	Textbook, Learning Materials, Online Resources	The materials used in teaching give extra support for both teachers and students. They provide more content and activities that help make the lesson easier to understand and more engaging.
5. Assessed Curriculum (Assessment Process)	Quizzes, Test, Periodical Exam	Assessments are done to measure how much students have learned and improved. They also help teachers identify which areas students still find difficult and need more focus on.
6. Learning Curriculum (Achieved Learning Outcomes)	Projects, Performance Task, Summative tests	This part reflects the real knowledge and skills that students gain from the different activities. It shows if the goals of education are being met effectively.
7. Hidden Curriculum (Media)	School Culture, Peers, School Values	These are the lessons students learn outside formal teaching through social interactions and experiences in school. They help in shaping students' values, behavior, and social understanding.

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 8 Close Encounter with the School Curriculum

ANALYZE

Which of the seven types of curriculum in the school setting is easy to find? Why?

For me, the easiest one to find is the Written Curriculum like the teacher's lesson plan. Because it is something that is always present and prepared before every class. It is well known that teachers really rely on it to guide their lessons and activities, so it's always available and easy to access. You can literally see it in their folders or on their desks before they start teaching.

Which is difficult to observe? Why?

I think the Hidden Curriculum is the hardest one to observe because it is not something written or directly taught. It's more on the unspoken lessons that students pick up through their environment or through the teacher's behavior, like how they interact with others, their tone, or how they handle situations. It takes time and a lot of observation to really notice it.

Are these all found in the school setting? How do curricula relate to one another?

Yes, all of these types of curriculum can be found in the school setting that I am observing. They are all connected because one supports the other, like the Recommended Curriculum sets the standards, the Written Curriculum translates it into lesson plans, the Taught Curriculum brings it to life in the classroom, and the Assessed Curriculum checks if the learning goals were met. Then, the Supported Curriculum provides the materials, the Learning Curriculum shows what students actually learned, and the Hidden Curriculum shapes their attitude and values. Altogether, they create a complete learning experience.

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 8 Close Encounter with the School Curriculum

Draw a diagram to show the relationship of the curriculum to the other.

REFLECT

Make a reflection on the diagram that you have drawn.

Looking at the simple diagram I made, I realized how each type of curriculum connects with one another like a chain that keeps the entire education system working. The Recommended Curriculum serves as the base, it provides direction and sets the standards for what students should learn. From there, teachers translate it into the Written Curriculum through their lesson plans, making the learning goals more specific and organized. Then comes the Taught Curriculum, where lessons come alive through the teacher's instruction and classroom interaction. Then the Supported Curriculum plays a vital role here by providing materials and resources that make learning more engaging and meaningful. Next is, the Assessed Curriculum measures how well students understood the lesson, while the Learned Curriculum reflects the actual outcomes, what students truly learned and how they grew. But what strikes me most is the Hidden Curriculum, which is always present in the background. But it is not written or tested, yet it shapes students' behavior, values, and attitudes through everyday classroom experiences. For me, the diagram shows that all these types of curriculum are interconnected and equally important. If one part is missing or weak, it affects the rest. It made me realize that as a future teacher, I should not only focus on what I teach but also how I teach and the kind of impact I leave on my students because learning doesn't come solely from books or tests, but also from the environment and the teacher's example.

Activity 8.2

The Minuscule School Curriculum: The Lesson, A Closer Look

Resource Teacher : Sir Kim Paolo Armin A. Torcelino VI Signature:  School: Abaño Laboratory

Grade/Year Level : Grade 10-Naghihimagsik Subject Area : Science Date: 10/07/25

OBSERVE

This activity requires a full lesson observation from Motivation to Assessment.

Procedure:

1. Secure permit to observe one complete lesson in a particular subject, in a particular grade/year level.
2. Keep a close watch on the different components of the miniscule curriculum: the lesson
3. Follow the three major components of a curriculum (Planning, Implementing, and Evaluating/ Assessing). Observe and record your observation.

Observe and Record Observations on the Following Aspects

Major Curriculum Components	Key Guide for Observation (Carefully look for the indicators/behavior of the teacher along the key points. Write your observation and description in your notebook.)
A. Planning	Borrow the teacher's lesson plan for the day. What major parts do you see? Request a copy for your use. Answer the following questions: a. What are the lesson objectives/learning outcomes? At the end of the lesson, students should be able to: Cognitive: Understand that momentum depends on both mass and velocity

Episode 8 Close Encounter with the School Curriculum

	4. ELABORATE (10 min.) - Application problems: - Three practice problems (truck, soccer ball, bowling ball scenarios) - Students apply understanding to solve equations EVALUATE (5 min.) - Formal assessment with four problems to solve individually on a whole sheet of paper d. Will the teacher assess or evaluate the lesson? How will this be done? Yes, assessment occurs at multiple levels: Formative Assessment: - Observation during "Arrange Me" activity - Rubrics for the Bouncing Ball experiment evaluating: - Preparation & Materials (5 points) - Data recording & completeness (5 points) - Analysis & understanding (5 points) - Time management (5 points) - Total: 20 points possible Summative Assessment: - Written evaluation with 4 problem-solving questions about momentum - Students solve problems on 1 whole sheet of paper - Problems include calculating momentum and mass in various scenarios
B. Implementing	Now it's time to observe how the teacher implemented the prepared lesson plan. Observe closely the procedure. a. How did the teacher begin the lesson? The teacher began with Preliminary Activities: Prayer - Starting the day spiritually Greetings - "Good Morning Class!" and checking on students' well-being Classroom management - Asking students to pick up paper under chairs before sitting Attendance - Checking for absentees through the class secretary Recapitulation - Reviewing previous lesson on Projectile Motion to activate prior knowledge

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 8 Close Encounter with the School Curriculum

	b. What procedure or steps were followed? The teacher followed a structured 5E learning cycle: Step 1: Engage - Group vocabulary activity connecting to lesson Step 2: Explore - Hands-on bouncing ball experiment with data collection Step 3: Explain - Teacher-led instruction on momentum formula and concepts Step 4: Elaborate - Guided practice with 3 application problems Step 5: Evaluate - Independent assessment with 4 problems c. How did the teacher engage the learners? The teacher engaged learners through: • Collaborative learning: Dividing class into 4 groups for activities • Gamification: "Arrange Me" word puzzle making learning fun • Hands-on experimentation: Bouncing ball activity with actual materials • Real-world connections: Using relatable examples (bowling ball, truck, soccer ball, cheetah, bicycle) • Active participation: Students physically conduct experiments, record data, and solve problems • Leadership opportunities: Each group selects a leader d. Was the teacher a guide at the side? Yes, evidence shows facilitation approach: • Teacher provides activity sheets with instructions rather than lecturing throughout • Students work in groups while teacher monitors ("Kindly select your leader and come here in front") • Structured rubric allows students to self-assess their work • Exploration phase (15 minutes) allows independent investigation • Teacher transitions from direct instruction (Explain phase) to guided practice (Elaborate) to independent work (Evaluate) e. Were the learners on task?/Or were they participating in the class activity? Indicators suggest active participation: • Group work structure promotes engagement

Episode 8 Close Encounter with the School Curriculum

	- Time limits create urgency and focus (15 minutes for experiment) - Rubrics include time management criteria, encouraging on-task behavior - Multiple activities (vocabulary, experiment, problem-solving) maintain interest - Hands-on materials (ball, clay, measuring tape) promote active involvement - Assessment accounts for participation through rubric criteria f. Was the lesson finished within the class period? Yes, the lesson appears well-timed for a 1-hour period: - Engage: 5 minutes - Explore: 5 minutes (note: 15 minutes in instructions seems to be actual activity time) - Explain: 10 minutes - Elaborate: 10 minutes - Evaluate: 5 minutes Plus: Preliminary activities and transitions Total: Approximately 60 minutes with appropriate pacing
C. Evaluating Assessing	/ Did learning occur in the lesson taught? Here you make observations to find evidence of learning. a. Were the objectives as learned outcomes achieved? Evidence suggests objectives were addressed: Objective A (Understand momentum depends on mass and velocity): - Formula explicitly taught: $p = m \times v$ - Examples demonstrate relationship between mass, velocity, and momentum - Practice problems require applying this understanding Objective B (Conduct experiment to measure momentum): - Bouncing ball experiment conducted with materials, measurements, and data recording - Students practiced using scientific equipment (stopwatch, measuring tape)

	Objective C (Develop curiosity about surfaces and materials): • Ball wrapped with clay to modify collision properties • Experiment structure encourages observation of how materials affect bouncing • Analysis criteria in rubric prompts thinking about bounce height and time b. How did the teacher assess/evaluate it? Multiple assessment methods: 1. Performance-Based Assessment: ○ Rubric-scored bouncing ball experiment (20 points total) ○ Evaluates preparation, data recording, analysis, and time management 2. Formative Assessment: ○ "Arrange Me" vocabulary activity (checking understanding of key terms) ○ Observation during group work ○ Three Elaborate phase practice problems 3. Summative Assessment: ○ Four written problems requiring calculations ○ Individual work on whole sheet of paper ○ Problems test application of momentum formula c. What evidence was shown? Get pieces of evidence. Evidence of Learning: 1. Student Work Products: ○ Completed activity sheets from bouncing ball experiment ○ Data tables with bounce height and time measurements ○ Written solutions to 4 evaluation problems on paper 2. Observable Behaviors: ○ Correct arrangement of vocabulary terms with definitions ○ Successful data collection during experiment ○ Ability to solve problems independently

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 8 Close Encounter with the School Curriculum

Write a paragraph based on the data you gathered using these key questions.

1. How does the teacher whom you observed compare to the ideal characteristics or competencies of global quality teachers?

The resource teacher I observed really showed many of the qualities that I think fit a globally competent teacher. Sir Kim was very organized and knowledgeable in the subject, and it showed in how the lesson plan was made using the 5E model. The lesson plan didn't just focus on lecturing but allowed students to explore, ask questions, and learn by doing. It was clear that he prepared well, setting objectives that developed not just the mind, but also the skills and attitudes of the students. I also liked how he encouraged collaboration among the class, which really fits our Filipino culture of teamwork like Bayanihan. The experiment part showed that he wanted students to experience learning hands-on, not just listen. He also used rubrics and both formative and summative assessments to make sure everyone was progressing. What stood out most for me was the reflection part in his lesson plan, it showed that he values improvement and really thinks about what works and what doesn't. For me, that's what makes him a globally minded and effective teacher.

2. Was the lesson implemented as planned? Describe.

From how the lesson plan was written, it was clear that the resource teacher planned everything carefully and realistically within the 1 hour session. It had a smooth flow from connecting prior knowledge, engaging the students with a fun vocabulary game, up to exploring and experimenting using the bouncing ball activity. The sequence of the 5E model was followed very well. You could really see how it went from engaging students to letting them explore and later apply what they learned. Materials like PowerPoint, worksheets, and rubrics were all prepared ahead, so it showed how ready the teacher was. I also liked that the lesson didn't just stop at teaching momentum, it connected to future lessons, like energy transformation, which made the plan more continuous and meaningful. You could tell the lesson would run smoothly in class because it was not only well-planned but also student-centered.

3. Describe the methods used by the teacher in handling the students' differences in abilities. How did the students respond to the teacher? Did the teacher use differentiated instruction? If yes, describe how.

Yes, the teacher used different strategies to handle students with different learning styles and abilities. In the engaging activity, everyone got a chance to participate, some arranged letters, others shared ideas, and some explained the meanings. During the experiment, each group member had their own role, which allowed them to contribute based on their strengths. It was nice because everyone was active in their own way. The resource teacher also used rubrics that showed different levels of performance, which helped students understand where they

FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 8 Close Encounter with the School Curriculum

stood and how they could improve. I think students responded well because the activities were fun, engaging, and encouraged teamwork, which made learning more inclusive and motivating.

4. Can you describe the disposition of the teacher after the lesson was taught? Happy and eager? Satisfied? Disappointed and exhausted?

Even though I wasn't there to directly see it, based on the reflection part in the lesson plan, I could tell the teacher was satisfied yet still reflective. The way he wrote the reflection questions showed that he really wanted to evaluate himself, not just to see what went right, but also to think about what could be improved. It reminds me of my previous professor that focuses on improving the learning process by making us write what are our suggestions for improvement in her class. Back to the resource teacher, I imagine he felt happy and fulfilled because of how organized and engaging the lesson was, but maybe he also a bit tired after facilitating group work and experiments, which take a lot of energy. Still, he seemed eager to keep improving and focused on his students' success. You can really feel the passion and dedication through his planning and reflection, which I see as qualities of a teacher who sees teaching as a continuous process of learning and growing.

5. Can you describe the majority of students' reactions after the lesson was taught? Confused? Happy and eager? Contented? No reactions at all.

From how the activities were designed, I believe most students were happy and eager after the lesson. The experiment part was definitely exciting since it gave them a chance to see the concept in action rather than just listening. The group work also made the learning atmosphere more fun and less intimidating, which encouraged everyone to participate. The step-by-step process from exploration to solving problems helped prevent confusion. Students who understood the concepts well must have felt proud and accomplished, while those who struggled a bit still had support through the collaborative setup. The vocabulary and practice activities helped everyone stay on track and confident. Overall, I think the students likely felt satisfied and more interested in the topic. I can say that they learned while enjoying the process, which is one of the best signs that the lesson was effective.

Episode 8 Close Encounter with the School Curriculum

REFLECT

Based on your observations and tasks in Activity 2 how will you prepare your lesson plan? Make a short paragraph on the topic.

After observing Sir Kim's lesson on momentum, I learned several things that I can apply in making my own lesson plans. On our previous years in college, we had a subject "The teaching of Science", in which I first learned that using a structured model like the 5E framework makes the lesson flow smoother and more organized, from engaging students to evaluating their understanding. It also balances teacher-led and student-centered activities effectively especially in teaching the science subject.

On this episode, I realized that setting clear and specific objectives is very important, not only focusing on what students should know but also what they should do and feel. It helps develop well-rounded learners. I also saw how group activities and experiments make students more active and excited to learn, showing that hands-on experiences truly deepen understanding. I'll make sure to use that technique in my own lesson plans too. I also learned that managing time properly is essential so every part of the lesson is given enough focus. Lastly, connecting the lesson to real-life examples, like using bowling balls and cheetahs to explain momentum, made learning more relatable and meaningful. Overall, I realized that good lesson planning isn't just about finishing the topic, it's about creating engaging, relevant, and well-structured learning experiences that help students truly understand and enjoy what they learn.

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 8 Close Encounter with the School Curriculum

OUTCOMES	TEACHING METHOD	ASSESSMENT
At the end of the lesson, students should be able to: a) Cognitive: Understand that momentum depends on both mass and velocity. Students will be able to define momentum as a vector quantity and apply the formula $p = m \times v$ to calculate momentum in various scenarios. b) Psychomotor: Conduct an experiment to measure the momentum of a bouncing ball using scientific equipment including measuring tape, stopwatch, and data recording sheets. Students will demonstrate proper data collection and measurement techniques. c) Affective: Develop curiosity about why different surfaces and materials affect collisions differently. Students will show engagement in scientific inquiry and appreciation for real-world applications of momentum through collaborative investigation and problem-solving activities.	5E Instructional Model: 1. ENGAGE (5 min.): "Arrange Me" group activity where students rearrange jumbled letters to form key vocabulary terms (MOMENTUM, IMPULSE, MASS, FORCE, VELOCITY) and match them with definitions posted on the board. This activates prior knowledge and introduces essential concepts. 2. EXPLORE (15 min.): "Bouncing Ball" hands-on experiment where student groups wrap a ball with clay, measure bounce height using measuring tape, record time with stopwatch, and collect data in organized tables. Students work collaboratively following structured procedures. 3. EXPLAIN (10 min.): Direct instruction on momentum concept including the formula $p = m \times v$, explanation of momentum as a vector quantity with magnitude and direction, and worked example solving for momentum of a 6.0 kg bowling ball moving at 3.5 m/s. 4. ELABORATE (10 min.): Guided practice with three	Formative Assessment: 1. "Arrange Me" Vocabulary Activity: Observe students' ability to correctly identify and match momentum-related terms with definitions, checking for understanding of key concepts before formal instruction. 2. Bouncing Ball Experiment Rubric (20 points total): - Preparation & Materials (5 pts): Evaluates whether students have all required materials in good condition - Data Recording & Completeness (5 pts): Assesses quality and completeness of data tables - Analysis & Understanding (5 pts): Measures students' ability to explain how bounce height and time relate to momentum - Time Management (5 pts): Checks whether activity completed within allocated time 3. Elaborate Phase Observation: Monitor students during guided practice with three application problems, providing feedback and

	application problems involving trucks, soccer balls, and bowling balls where students apply the momentum formula to solve real-world scenarios, working both to find momentum and to find mass given momentum and velocity. 5. EVALUATE (5 min.): Individual assessment where students independently solve four momentum problems on one whole sheet of paper, demonstrating mastery of calculating momentum and mass in various contexts including cheetahs, bicycles, baseballs, and drones. Additional strategies: Collaborative group work (4 groups), hands-on experimentation with concrete materials, real-world problem contexts, scaffolded learning progression from concrete to abstract, and use of rubrics for transparent expectations.	identifying misconceptions before summative assessment. Summative Assessment: Written Evaluation (Individual work on 1 whole sheet of paper): Four problem-solving questions requiring students to: • Calculate momentum given mass and velocity (Problems 1 & 2: cheetah at 70 kg and 25 m/s; bicycle at 80 kg and 10 m/s) • Calculate mass given momentum and velocity (Problems 3 & 4: baseball with 5 kg·m/s at 40 m/s; drone with 1.2 kg·m/s at 0.3 m/s) Assessment Evidence: • Completed activity sheets with experimental data • Rubric scores showing performance levels • Written solutions demonstrating proper formula application ($p = m \times v$), correct unit usage (kg·m/s), and mathematical accuracy • Reflection data tracking number of students achieving 80% mastery and identifying those requiring remediation

ANALYZE

Answer the following questions based on the diagram.

1. Are the three components constructively aligned? Explain.

Yes, I think the three components of the lesson plan are clearly aligned with each other. All of them, from what students need to learn, to how they will learn it, and finally how they will be assessed, everything connects smoothly. In the momentum lesson, the cognitive outcome (understanding that momentum depends on both mass and velocity) was taught during the Explain phase using the formula $p = m \times v$, and students later applied it in solving problems. While the psychomotor part (doing an experiment), matched the Explore phase where they tested bouncing balls, while the affective part (showing curiosity about collisions) was seen in how they observed and analyzed results. The rubric also checked how well they explained their findings, so it really measured if they met the objectives. Everything was consistent and well-connected, so students weren't just doing random tasks, each part had a purpose that supported the others.

2. Will the outcomes be achieved with the teaching methods used? Why?

Yes, I believe the outcomes can really be achieved because the teaching methods used are very effective and student-centered. The lesson followed the 5E model, which helped make learning more meaningful. The Engage part got students curious, the Explore phase let them discover ideas by doing experiments, and the Explain part helped them understand the concepts behind what they just did. Then the Elaborate and Evaluate phases gave them time to apply what they learned and check if they truly understood. The use of group activities, problem-solving, and real-life examples made the lesson more exciting and easy to relate.

3. What component would tell if the outcomes have been achieved?

The assessment part will show if the outcomes were really achieved since it gives proof of what students actually learned. In this lesson, the teacher used both formative and summative assessments, like the experiment rubrics, activity sheets, and written problem sets. These helped check not just if students understood the concept, but also if they could apply it and explain their results correctly. The rubric made it clear how their performance was rated, while the written problems tested their mastery.

Episode 8 Close Encounter with the School Curriculum

REFLECT

What lessons have you learned in developing or writing a lesson plan?

From observing Sir Kim's lesson plan on momentum, I realized that lesson planning is more than just a requirement, it is the heart of good teaching. A well-written lesson plan gives direction and purpose to everything that happens in class. I learned how important it is to make learning outcomes clear and specific because they guide what activities to use and how to assess students properly. Before, I used to think lesson plans were just about writing steps, but now I see they're about connecting everything, from the objectives, teaching strategies, and assessments, it must be properly organized so that learning becomes meaningful and smoothly flowing.

What value will it give to the teacher if the three components are aligned?

Based on my observation, when the outcomes, teaching methods, and assessments are aligned, everything in the classroom makes sense. It helps the teacher teach with confidence because every part of the lesson supports the same goal. It also saves time and reduces stress since you already know what to teach, how to teach it, and how to measure if learning really happened. I experienced before how confusing it is when lessons and tests don't match, it is frustrating for both students and teachers. That's why alignment matters, because it keeps teaching fair and consistent.

Activity 2: Artifact

1. Present a sample curriculum in the form of a Lesson Plan.

Republic of the Philippines
CAMARINES NORTE STATE COLLEGE
F. Pimentel Avenue, Brgy. 2, Daet, Camarines Norte – 4600, Philippines

Lesson Plan	School	Camarines Norte State College- Abaño Campus Laboratory School	Year Level	Grade 10
	Teacher	Kim Paolo Armin A. Torcelino VI	Grading	2 nd Grading
	Allotted Time	1 hour	Subject	Physics
I. OBJECTIVES	At the end of the lesson the students should be able to;			
	a) Understand that momentum depends on both mass and velocity. b) Conduct an experiment to measure the momentum of a bouncing ball. c) Develop a curiosity about why different surfaces and materials affect collisions differently.			

II. SUBJECT MATTER	
Topic:	Momentum
Materials:	PowerPoint Presentation, Activity Sheet
References:	Sources: Physics Textbook: reprint edition 2007 – 2009 Exploring life through Science – PHYSICS: Angelina A. Silverio http://www.physicstutorials.org/home/impulse-momentum/momentum http://www2.franciscan.edu/academic/mathsci/mathscienceintegration/MathScienceIntegration-848.htm

III. PRELIMINARY ACTIVITIES	TEACHER'S ACTIVITY
A. Prayer	'Class, let's start the day with a prayer.'
B. Greetings	'Good Morning Class!' 'How are you feeling today?' 'Before you sit down, I wanted you to pick up all the piece of paper under your chair and put it inside your bag.'
C.Attendance	'Class secretary, do we have absentees for today?'
D. Recapitulation	'Yesterday, our discussion was all about the Projectile Motion. Now can anyone recall what projectile motion is and give some examples?'
IV. LESSON PROPER	
ENGAGE (5 min.)	The teacher will give an activity. Activity: Arrange Me Directions: The class will be divided into 4 groups. Each group will rearrange the jumbled letters. Each word that the group will form has its meaning paste on the board. The group will locate the phrase that describes the rearranged word. WORD 1: ENMTMOOM
